11.2 Notes

Superscript numbers are used to annotate any L31-Firmicutes RNA that has special characteristics (described below). These numeric annotations will be used in Sections 11.3 and 11.5. The meaning of the numbers are as follows.

¹ A different alignment would have a somewhat stronger hairpin, but would somewhat lose conserved nucleotides. It's unclear which alignment of this se-

quence is better.

11.3 Gene contexts

Each L31-Firmicutes RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L31-Firmicutes RNA are assigned a color; other domains are gray. Information about these conserved

domains is given in Section 11.4. The accession of the sequence containing each L31-Firmicutes RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accessions refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L31-Firmicutes RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 11.1. (Superscript numbers refer to annotations listed in Section 11.2)

11.4 Conserved domains

Conserved domains found in protein-coding genes listed in Section 11.3 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L31-Firmicutes RNA are assigned a color, while others are shown in gray. The symbols ‘d’ and ‘u’ (if any) to the left of the colored domain name indicate whether the

domain occurs upstream or downstream of the RNA motif. Domains marked with lower-case ‘d’ occur (at least once) present downstream of some L31-Firmicutes RNA in the opposite orientation. Domains marked with capital ‘D’ occur downstream and in the same orientation (i.e., a potential *cis*-regulatory arrangement). Domains marked with a ‘u’ occur upstream of the RNA in either orientation. If

the ‘d’/‘u’ symbols are missing, then the domain is downstream and in the same strand. (This mode is used for motifs predicted as *cis*-regulatory.) The num-

cd00156 (2) Signal receiver domain; originally thought to be unique to bacteria (CheY, OmpR, NtrC, and PhoB), now recently identified in eukaryotes ETR1 *Arabidopsis thaliana*; this domain receives the signal from the sensor partner in a two-component systems; contains a phosphoacceptor site that is phosphorylated by histidine kinase homologs; usually found N-terminal to a DNA binding effector domain; forms homodimers

cd00198 (3) Von Willebrand factor type A (vWA) domain was originally found in the blood coagulation protein von Willebrand factor (vWF).

cd00229 (6) SGNH_hydrolase, or GDSL_hydrolase, is a diverse family of lipases and esterases.

cd00293 (2) Usp: Universal stress protein family.

cd00383 (1) DNA-binding effector domain of two-component system response regulators.

cd00430 (5) Type III Pyridoxal 5-phosphate (PLP)-Dependent Enzyme Alanine Racemase.

cd00552 (6) RaiA (“ribosome-associated inhibitor A”, also known as Protein Y (PY), YfiA, and SpotY, is a stress-response protein that binds the ribosomal subunit interface and arrests translation by interfering with aminoacyl-tRNA binding to the ribosomal A site.

cd00616 (1) 3-amino-5-hydroxybenzoic acid synthase family (AHBA_syn).

cd02947 (1) TRX family; composed of two groups: Group I, which includes proteins that exclusively encode a TRX domain; and Group II, which are composed of fusion proteins of TRX and additional domains.

cd03674 (2) Members of the Nudix hydrolase superfamily catalyze the hydrolysis of Nucleoside Diphosphates linked to other moieties, X.

cd04250 (1) AAK_NAGK-C: N-Acetyl-L-glutamate kinase - cyclic (NAGK-C) catalyzes the phosphorylation of the gamma-COOH group of N-acetyl-L-glutamate (NAG) by ATP in the second step of arginine biosynthesis found in some bacteria and photosynthetic organisms using the non-acetylated, cyclic route of ornithine biosynthesis.

cd06165 (10) Sortase domain found in class A sortases.

cd06262 (4) mainly hydrolytic enzymes and related proteins which carry out various biological functions; MBL-fold metallohydrolase domain.

cd06850 (1) The biotinyl-domain or biotin carboxyl carrier protein (BCCP) domain is present in all biotin-dependent enzymes, such as acetyl-CoA carboxylase, pyruvate carboxylase, propionyl-CoA carboxylase, methylcrotonyl-CoA carboxylase, geranyl-CoA carboxylase, oxaloacetate decarboxylase, methylmalonyl-CoA decarboxylase, transcarboxylase and urea amidolyase.

cd06853 (29) This subfamily contains *Escherichia coli* WecA, *Bacillus subtilis* TagO and related proteins.

cd07516 (1) phosphatase, similar to *Escherichia coli* Cof and *Thermotoga maritima* TM0651; belongs to the haloacid dehalogenase-like superfamily.

cd07557 (4) Trimeric dUTP diphosphatases.

cd07733 (3) uncharacterized subgroup which includes *Bacillus subtilis* YycJ and related proteins; MBL-fold metallo hydrolase domain.

cd07743 (1) uncharacterized subgroup of the MBL-fold_metallo-hydrolase superfamily; MBL-fold metallo hydrolase domain.

cd07937 (1) Pyruvate carboxylase and Transcarboxylase 5S, carboxyltransferase domain.

cd10225 (12) MreB and similar proteins.

cd12114 (1) The adenylation domain of nonribosomal peptide synthetases (NRPS), including *Streptoalloteichus tallsomycin* biosynthesis genes.

ber in parentheses after the colored domain name is the number of occurrences in Section 11.3.

cd16015 (20) Lipoteichoic acid synthase like.

cd16344 (1) low molecular weight protein arginine phosphatase.

CHL00117 (1) RNA polymerase beta” subunit; Reviewed

COG0150 (1) Phosphoribosylaminoimidazole (AIR) synthetase [Nucleotide transport and metabolism]

COG0168 (1) Trk-type K⁺ transport system, membrane component [Inorganic ion transport and metabolism]

COG0189 (2) Glutathione synthase/RimK-type ligase, ATP-grasp superfamily [Coenzyme transport and metabolism, Translation, ribosomal structure and biogenesis]

COG0216 (90) Protein chain release factor A [Translation, ribosomal structure and biogenesis]

COG0254 (3) Ribosomal protein L31 [Translation, ribosomal structure and biogenesis]

COG0357 (12) 16S rRNA G527 N7-methylase RsmG (former glucose-inhibited division protein B) [Translation, ribosomal structure and biogenesis]

COG0381 (3) UDP-N-acetylglucosamine 2-epimerase [Cell wall/membrane/envelope biogenesis]

COG0394 (3) Protein-tyrosine-phosphatase [Signal transduction mechanisms]

COG0415 (8) Deoxyribodipyrimidine photolyase [Replication, recombination and repair]

COG0436 (1) Aspartate/methionine/tyrosine aminotransferase [Amino acid transport and metabolism]

COG0439 (1) Biotin carboxylase [Lipid transport and metabolism]

COG0445 (13) tRNA U34 5-carboxymethylaminomethyl modifying enzyme MnmG/GidA [Translation, ribosomal structure and biogenesis]

COG0456 (1) Ribosomal protein S18 acetylase RimI and related acetyltransferases [Translation, ribosomal structure and biogenesis]

COG0461 (3) AAA+-type ATPase, SpoVK/Ycf46/Vps4 family [Cell wall/membrane/envelope biogenesis, Cell cycle control, cell division, chromosome partitioning, Signal transduction mechanisms]

COG0472 (1) UDP-N-acetylmuramyl pentapeptide phosphotransferase/UDP-N-acetylglucosamine-1-phosphate transferase [Cell wall/membrane/envelope biogenesis]

COG0518 (5) Superfamily II DNA and RNA helicase [Replication, recombination and repair]

COG0561 (1) Hydroxymethylpyrimidine pyrophosphatase and other HAD family phosphatases [Coenzyme transport and metabolism, General function prediction only]

COG0590 (43) tRNA(Arg) A34 adenosine deaminase Tada [Translation, ribosomal structure

and biogenesis]

- COG0602** (21) Organic radical activating enzyme [General function prediction only]
COG0653 (8) Preprotein translocase subunit SecA (ATPase, RNA helicase) [Intracellular trafficking, secretion, and vesicular transport]
COG0657 (1) Acetyl esterase/lipase [Lipid transport and metabolism]
COG0674 (3) Pyruvate:ferredoxin oxidoreductase or related 2-oxoacid:ferredoxin oxidoreductase, alpha subunit [Energy production and conversion]
COG0697 (2) Permease of the drug/metabolite transporter (DMT) superfamily [Carbohydrate transport and metabolism, Amino acid transport and metabolism, General function prediction only]
COG0736 (5) Phosphopantetheinyl transferase (holo-ACP synthase) [Lipid transport and metabolism]
COG0745 (1) DNA-binding response regulator, OmpR family, contains REC and winged-helix (wHTH) domain [Signal transduction mechanisms, Transcription]
COG0756 (13) dUTPase [Nucleotide transport and metabolism, Defense mechanisms]
COG0770 (5) UDP-N-acetylmuramyl pentapeptide synthase [Cell wall/membrane/envelope biogenesis]
COG0784 (2) CheY chemotaxis protein or a CheY-like REC (receiver) domain [Signal transduction mechanisms]
COG0840 (1) Methyl-accepting chemotaxis protein [Cell motility, Signal transduction mechanisms]
COG1013 (2) Pyruvate:ferredoxin oxidoreductase or related 2-oxoacid:ferredoxin oxidoreductase, beta subunit [Energy production and conversion]
COG1014 (2) Pyruvate:ferredoxin oxidoreductase or related 2-oxoacid:ferredoxin oxidoreductase, gamma subunit [Energy production and conversion]
COG1145 (2) Ferredoxin [Energy production and conversion]
COG1192 (5) Cellulose biosynthesis protein BcsQ [Cell motility]
COG1235 (12) Phosphoribosyl 1,2-cyclic phosphodiesterase [Inorganic ion transport and metabolism]
COG1275 (1) Tellurite resistance protein TehA and related permeases [Defense mechanisms]
COG1278 (1) Cold shock protein, CspA family [Transcription]
COG1368 (4) Phosphoglycerol transferase MdoB or a related enzyme of AlkP superfamily [Cell wall/membrane/envelope biogenesis]
COG1404 (1) Serine protease, subtilisin family [Posttranslational modification, protein turnover, chaperones]
COG1435 (423) Thymidine kinase [Nucleotide transport and metabolism]
COG1475 (6) Chromosome segregation protein Spo0J, contains ParB-like nuclease domain [Cell cycle control, cell division, chromosome partitioning]
COG1476 (1) DNA-binding transcriptional regulator, XRE-family HTH domain [Transcription]
COG1544 (2) Ribosome-associated translation inhibitor RaiA [Translation, ribosomal structure and biogenesis]
COG1737 (4) DNA-binding transcriptional regulator, MurR/RpiR family, contains HTH and SIS domains [Transcription]
COG1940 (2) Sugar kinase of the NBD/HSP70 family, may contain an N-terminal HTH domain [Transcription, Carbohydrate transport and metabolism]
COG2235 (4) Arginine deiminase [Amino acid transport and metabolism]
COG2323 (7) Uncharacterized membrane protein YcaP, DUF421 family [Function unknown]
COG2335 (21) Peptidoglycan hydrolase (amidase) enhancer domain [Cell

wall/membrane/envelope biogenesis]

- COG2812** (2) DNA polymerase III, gamma/tau subunits [Replication, recombination and repair]
COG2826 (1) Transposase and inactivated derivatives, IS30 family [Mobilome: prophages, transposons]
COG2890 (62) Methylase of polypeptide chain release factors [Translation, ribosomal structure and biogenesis]
COG3279 (17) DNA-binding response regulator, LytR/AlgR family [Transcription, Signal transduction mechanisms]
COG3290 (13) Sensor histidine kinase regulating citrate/malate metabolism [Signal transduction mechanisms]
COG3415 (1) Transposase [Mobilome: prophages, transposons]
COG3608 (2) ABC-type uncharacterized transport system, permease component [General function prediction only]
COG4632 (2) Exopolysaccharide biosynthesis protein related to N-acetylglucosamine-1-phosphodiester alpha-N-acety. [Carbohydrate transport and metabolism]
COG5279 (2) Cytokinesis protein 3, contains TGc (transglutaminase/protease-like) domain [Cell cycle control, cell division, chromosome partitioning]
COG5421 (1) Transposase [Mobilome: prophages, transposons]
COG5492 (1) Uncharacterized conserved protein YjdB, contains Ig-like domain [General function prediction only]
MTH00151 (1) NADH dehydrogenase subunit 5; Provisional
pfam00301 (1) Rubredoxin.
pfam00302 (1) Chloramphenicol acetyltransferase.
pfam00334 (2) Nucleoside diphosphate kinase.
pfam00472 (1) RF-1 domain.
pfam00486 (1) Transcriptional regulatory protein, C terminal.
pfam00583 (2) Acetyltransferase (GNAT) family.
pfam00657 (2) GDSL-like Lipase/Acylhydrolase.
pfam00875 (1) DNA photolyase.
pfam00892 (2) EamA-like transporter family.
pfam01066 (1) CDP-alcohol phosphatidyltransferase.
pfam01197 (8437) Ribosomal protein L31.
pfam01551 (31) Peptidase family M23.
pfam01648 (4) 4'-phosphopantetheinyl transferase superfamily.

TIGR00810 (1) protein translocase, SecG subunit. [Protein fate, Protein and peptide secretion and trafficking]
TIGR00950 (1) Carboxylate/Amino Acid/Amine Transporter. [Transport and binding proteins, Amino acids, peptides and amines]
TIGR01068 (1) thioredoxin. [Energy metabolism, Electron transport]
TIGR01076 (10) LPXTG-site transpeptidase (sortase) family protein. [Cell envelope, Other, Protein fate, Protein and peptide secretion and trafficking]
TIGR01248 (3) AAA family ATPase, CDC48 subfamily.
TIGR01257 (3) retinal-specific rim ABC transporter. [Transport and binding proteins, Other]
TIGR01387 (2) heavy metal response regulator. [Regulatory functions, DNA interactions]
TIGR02150 (1) isopentenyl-diphosphate delta-isomerase, type 1. [Biosynthesis of cofactors, prosthetic groups, and carriers, Other]
TIGR02176 (1) pyruvate:ferredoxin (flavodoxin) oxidoreductase, homodimeric.
TIGR02377 (5) conserved hypothetical integral membrane protein.
TIGR02380 (13) undecaprenyl-phosphate alpha-N-acetylglucosaminyl 1-phosphatettransferase. [Cell envelope, Biosynthesis and degradation of surface polysaccharides and lipopolysaccharides]
TIGR02669 (16) SpoIID/LytB domain. [Unknown function, General]
TIGR02765 (1) cryptochrome, DASH family. [Cellular processes, Adaptations to atypical conditions]
TIGR02898 (7) sporulation lipoprotein, YhcN/YlaJ family. [Cellular processes, Sporulation and germination]
TIGR03023 (1) Undecaprenyl-phosphate glucose phosphotransferase.
TIGR03534 (8) protein-(glutamine-N5) methyltransferase, release factor-specific. [LIV]PRx[DE]TE (in Escherichia coli, IPRPDTE) confers specificity for the release factors rather than for ribosomal protein L3. [Protein fate, Protein modification and repair]
TIGR03556 (5) deoxyribodipyrimidine photo-lyase, 8-HDF type. [DNA metabolism, DNA replication, recombination, and repair]
TIGR03921 (1) type VII secretion-associated serine protease mycosin. [Protein fate, Protein and peptide secretion and trafficking, Protein fate, Protein modification and repair]
TIGR04181 (1) aminotransferase, LLPSF_NHT_00031 family.

11.5 Multiple-sequence alignment

Each L31-Firmicutes RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 11.1. (Superscript numbers refer to annotations listed in Section 11.2) The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L31-Firmicutes RNA itself is denoted by the line underneath marked 5' and 3' on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in *gray letters*. Stems of predicted rho-independent transcription terminators, if any, are shaded **yellow**. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in **green**. (But note: these predictions are manually an-

notated, so they might be under-predicted.) Annotated start codons, if any, are shaded **green**. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-Crick or G-U pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U

pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, **red nucleotides**: nucleotide identity conserved more than 97% of the time, **black nucleotides**: 90%, **gray nucleotides**: 75%, **red circle** (◉): nucleotide is present 97% of the time, **black circle** (●): 90%, **gray circle** (◐): 75%, **white circle** (○): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.

Duplicate sequences: the following putative homologs are not shown in the alignment because their sequences are identical to a homolog already shown: Aka-1-1, Ami-1-3, Asp-1-1, Asp-2-1, Asp-4-1, Axy-1-1, Bag-1-1, Bag-2-1, Bal-2-1, Bal-2-2, Bal-2-3, Bal-3-1, Bam-1-1, Bam-10-1, Bam-11-1, Bam-12-1, Bam-13-1, Bam-14-1, Bam-15-1, Bam-16-1, Bam-17-1, Bam-18-1, Bam-19-1, Bam-2-1, Bam-20-1, Bam-21-1, Bam-22-1, Bam-23-1, Bam-24-1, Bam-25-1, Bam-3-1, Bam-5-1, Bam-6-1, Bam-7-1, Bam-8-1, Bam-9-2, Bam-9-3, Ban-1-1, Ban-10-1, Ban-11-1, Ban-12-1, Ban-13-1, Ban-14-1, Ban-15-1, Ban-16-1, Ban-17-1, 12 L31-Gammaproteobacteria

12.1 Taxa

The taxonomy of each organism containing a putative L31- in *E. coli*). The abbreviations will be used to identify each individual L31-Gammaproteobacteria RNA is listed, with abbreviations identifying each hit Gammaproteobacteria RNA in Sections 12.2 and 12.4. (e.g., “Eco-1-1” and “Eco-1-2” might hypothetically represent two distinct RNAs

abbrev. of hits

12.2 Gene contexts

Each L31-Gammaproteobacteria RNA (indicated by “RNA→”) is listed. For each hit, the downstream genes predicted to reside in a regulated operon are listed. If the nearest downstream gene is encoding in the opposite strand (and therefore presumed to not be a part of a regulated operon), then that gene is still depicted. Some environmental sequences and some RefSeq entries lack gene annotations, and so no genes are available for such sequences. The direction of each gene is indicated with an arrow (→), and each predicted conserved domain in the gene is named. Conserved domains associated with more than one L31-Gammaproteobacteria RNA are assigned a color; other domains are gray. Infor-

mation about these conserved domains is given in Section 12.3. The accession of the sequence containing each L31-Gammaproteobacteria RNA is given in the column named “Seq. accession”. Accessions beginning with “NC_”, “NS_”, “NW_” or “NZ_” are contained in RefSeq. Other accession refer to environmental samples. Nucleotide coordinates are given for the 5′ and 3′ boundaries of each L31-Gammaproteobacteria RNA. If the 5′ coordinate is greater than the 3′ coordinate, the RNA is present on the reverse-complement strand of the containing genomic DNA sequence. Each hit is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 12.1.

12.3 Conserved domains

Conserved domains found in protein-coding genes listed in Section 12.2 are shown below, with the first sentence in their description from the Conserved Domain Database (if any). Conserved domains associated with more than one L31-

cd00090 (1) Arsenical Resistance Operon Repressor and similar prokaryotic, metal regulated homodimeric repressors.

cd00761 (18) Glycosyltransferase family A (GT-A) includes diverse families of glycosyl transferases with a common GT-A type structural fold.

cd01347 (5) TonB dependent/Ligand-Gated channels are created by a monomeric 22 strand (22,24) anti-parallel beta-barrel.

cd03811 (12) This family is most closely related to the GT1 family of glycosyltransferases.

cd04194 (11) A4GalT-like proteins catalyze the addition of galactose or glucose residues to the lipooligosaccharide (LOS) or lipopolysaccharide (LPS) of the bacterial cell surface.

cd05399 (1) Nucleotidyltransferase (NT) domain of RelA- and SpoT-like ppGpp synthetases and hydrolases. [D/E]

cd06532 (18) Glycosyltransferase family 25 [lipooligosaccharide (LOS) biosynthesis protein]

cd07812 (4) START/RHO_alpha_C/PITP/Bet_v1/CoxG/CalC (SRPBCC) ligand-binding domain superfamily.

cd08430 (12) The C-terminal substrate binding of LysR-type transcriptional regulator IlvY, which activates the expression of ilvC gene that encoding acetohydroxy acid isomeroreductase for the biosynthesis of branched amino acids; contains the type 2 periplasmic binding fold.

cd08893 (2) Putative hydrophobic ligand-binding SRPBCC domain of an uncharacterized subgroup of CalC- and Aha1-like proteins; some contain an N-terminal GntR family winged HTH DNA-binding domain.

cd11528 (1) Nucleoside Triphosphate Pyrophosphohydrolase (EC 3).

cd11529 (1) Nucleoside Triphosphate Pyrophosphohydrolase (EC 3).

COG0035 (1) Uracil phosphoribosyltransferase [Nucleotide transport and metabolism]

COG0254 (101) Ribosomal protein L31 [Translation, ribosomal structure and biogenesis]

COG0281 (144) Malic enzyme [Energy production and conversion]

COG0438 (11) Glycosyltransferase involved in cell wall bisynthesis [Cell wall/membrane/envelope biogenesis]

COG0702 (7) Uncharacterized conserved protein YbjT, contains NAD(P)-binding and DUF2867 domains [General function prediction only]

COG0859 (133) ADP-heptose:LPS heptosyltransferase [Cell wall/membrane/envelope biogenesis]

COG1198 (3) Primosomal protein N' (replication factor Y) - superfamily II helicase [Replication, recombination and repair]

COG1368 (1) Phosphoglycerol transferase MdoB or a related enzyme of AlkP superfamily [Cell wall/membrane/envelope biogenesis]

COG1943 (3) REP element-mobilizing transposase RayT [Mobilome: prophages, transposons]

COG2194 (2) Phosphoethanolamine transferase for periplasmic glucans (OPG), alkaline phosphatase superfamily [Cell wall/membrane/envelope biogenesis]

COG2211 (1) Na⁺/melibiose symporter or related transporter [Carbohydrate transport and metabolism]

COG3060 (2) Transcriptional regulator of met regulon [Transcription, Amino acid transport and metabolism]

COG3306 (4) Glycosyltransferase involved in LPS biosynthesis, GR25 family [Cell wall/membrane/envelope biogenesis]

COG3550 (1) Serine/threonine protein kinase HipA, toxin component of the HipAB toxin-

Gammaproteobacteria RNA are assigned a color, while others are shown in gray. The number in parentheses after the colored domain name is the number of occurrences in Section 12.2.

antitoxin module [Signal transduction mechanisms]

pfam00126 (12) Bacterial regulatory helix-turn-helix protein, lysR family.

pfam00535 (2) Glycosyl transferase family 2.

pfam00593 (3) TonB dependent receptor.

pfam00742 (2) Homoserine dehydrogenase.

pfam01197 (10003) Ribosomal protein L31.

pfam01755 (73) Glycosyltransferase family 25 (LPS biosynthesis protein).

pfam06178 (1) Oligogalacturonate-specific porin protein (KdGM).

pfam06306 (3) Beta-1,4-N-acetylgalactosaminyltransferase (CgtA).

pfam07526 (9) Associated with HOX.

pfam11066 (7) Protein of unknown function (DUF2867).

pfam13439 (9) Glycosyltransferase Family 4.

pfam13460 (7) NAD(P)H-binding.

pfam13641 (14) Glycosyltransferase like family 2.

pfam13692 (23) Glycosyl transferases group 1.

PRK00019 (10104) 50S ribosomal protein L31; Reviewed

PRK00129 (1) uracil phosphoribosyltransferase; Reviewed

PRK00528 (8) 50S ribosomal protein L31; Reviewed

PRK01678 (16) 50S ribosomal protein L31 type B; Reviewed

PRK05269 (2) transcriptional repressor protein MetJ; Provisional

PRK05580 (3) primosome assembly protein PriA; Validated

PRK09466 (2) bifunctional aspartate kinase II/homoserine dehydrogenase II; Provisional

PRK09562 (1) nucleoside triphosphate pyrophosphohydrolase; Reviewed

PRK09775 (1) putative DNA-binding transcriptional regulator; Provisional

PRK10073 (2) putative glycosyl transferase; Provisional

PRK10792 (2) lipopolysaccharide core biosynthesis protein; Provisional

PRK11204 (2) N-glycosyltransferase; Provisional

PRK11560 (2) phosphoethanolamine transferase; Provisional

PRK11716 (12) DNA-binding transcriptional regulator IlvY; Provisional

PRK13524 (4) outer membrane receptor FepA; Provisional

PRK13528 (3) outer membrane receptor FepA; Provisional

PRK14515 (1) aspartate ammonia-lyase; Provisional

PRK15171 (11) lipopolysaccharide 1,3-galactosyltransferase; Provisional

smart00919 (144) Malic enzyme, NAD binding domain.

smart00954 (1) Region found in RelA / SpoT proteins.

TIGR00792 (1) sugar (Glycoside-Pentoside-Hexuronide) transporter. [Transport and binding proteins, Carbohydrates, organic alcohols, and acids]

TIGR01783 (1) TonB-dependent siderophore receptor. [Transport and binding proteins, Cations and iron carrying compounds, Transport and binding proteins, Porins]

TIGR02193 (53) lipopolysaccharide heptosyltransferase I. [Cell envelope, Biosynthesis and degradation of surface polysaccharides and lipopolysaccharides]

TIGR02195 (9) lipopolysaccharide heptosyltransferase II. [Cell envelope, Biosynthesis and degradation of surface polysaccharides and lipopolysaccharides]

TIGR02201 (63) lipopolysaccharide heptosyltransferase III, putative. [Cell envelope, Biosynthesis and degradation of surface polysaccharides and lipopolysaccharides]

TIGR03937 (2) poly-beta-1,6 N-acetyl-D-glucosamine synthase.

12.4 Multiple-sequence alignment

Each L31-Gammaproteobacteria RNA is denoted by an abbreviation (like “Eco-1-1”) that refers to a taxonomy given in Section 12.1. The alignment may include sequences containing the RNA motif, as well as flanking sequence. The L31-Gammaproteobacteria RNA itself is denoted by the line underneath marked 5' and 3' on either end. Nucleotides in flanking sequences (i.e., not part of the motif) are written in gray letters. Stems of predicted rho-independent transcription terminators, if any, are shaded yellow. (Note: terminator predictions have not been analyzed manually, and many are likely to be false positives. Terminator predictions are those of the RNIE software.) Nucleotides predicted to function (as DNA) as transcription-factor binding sites, if any, are shaded in green. (But note: these predictions are manually annotated, so they might be under-predicted.) Annotated start codons, if any, are shaded green. (Note: start codons are frequently misannotated, especially in environmental samples.) Nucleotides proposed to basepair as part of the consensus structure are shaded in color when they comprise Watson-

Crick or G-U pairs. Otherwise they are shaded gray. Conserved stems are also indicated at the bottom of the alignment by angle brackets, where matching < and > denote base-paired columns. Below these angle brackets, the symbol “2” denotes base pairs exhibiting covariation according to the statistically well-founded R-scape method. “1” denotes base pairs exhibiting covariation according to R2R’s simplistic method. “0” denotes base pairs that are not observed to mutate and “?” denotes base pairs that have a significant frequency of non-canonical nucleotides for Watson-Crick or G-U pairs (> 5%). Below these base pair annotation is the consensus sequence: “R” = “A” or “G”, “Y” = “C” or “U”, red nucleotides: nucleotide identity conserved more than 97% of the time, black nucleotides: 90%, gray nucleotides: 75%, red circle (◐): nucleotide is present 97% of the time, black circle (◑): 90%, gray circle (◒): 75%, white circle (◓): 50%. All percentages of sequences just described (e.g. 97% conserved) assume that sequences have been weighted by the GSC algorithm implemented by the Infernal software package.
