

Figure S1. (A) miR-625-3p and (B) *AXL* mRNA expression in parental PC9 and gefitinib-resistant PC9GR cell lines. *AXL*, AXL receptor tyrosine kinase.

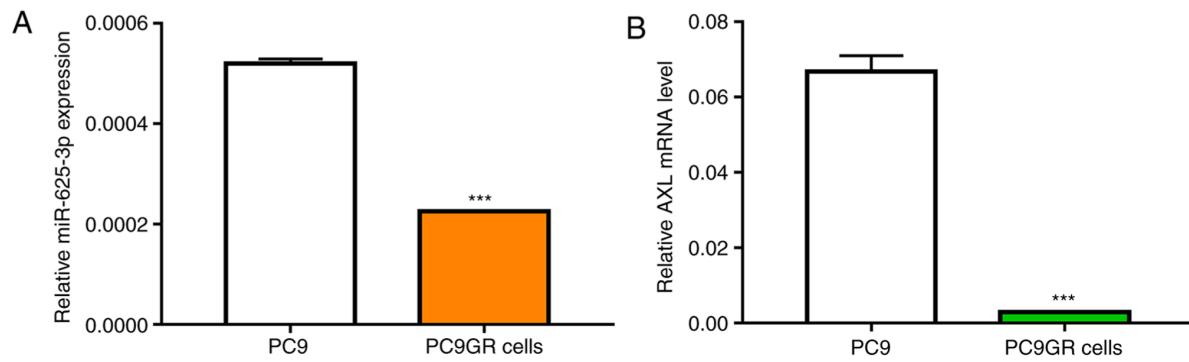

Figure S2. Luciferase activity in HCC827 and gefitinib-resistant HCC827GR cells after co-transfection of the construct containing the wild-type or mutant *AXL* 3'-UTR reporter gene and the miR-625-3p mimics or miR-NC. *AXL*, AXL receptor tyrosine kinase; UTR, untranslated region; NC, negative control.

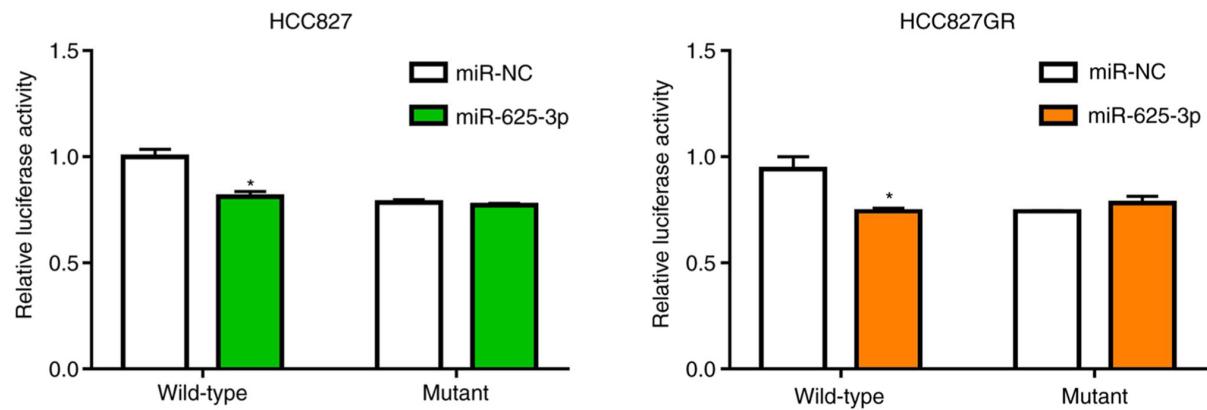

Table SI. List of 357 cancer detection genes.

Key genes of chemotherapy are highlighted in red. Key genes of targeted treatment are shown in blue. ^{GR}Genetic risk genes are indicated in green. The remaining genes in purple font are important driver genes.

Table SII. Hiseq-4000 second generation gene high-throughput sequencing.

Cell line	EGFR CNV	EGFR (19-del)	EGFR (20-T790M)
PC9	5.79	Yes	No
PC9GR	3.40	Yes	Yes
HCC827	21.70	Yes	No
HCC827GR	8.10	Yes	No

HCC827GR, gefitinib-resistant HCC827 cells; PC9GR, gefitinib-resistant PC9 cells; EGFR, epidermal growth factor receptor; CNV, copy number variation.
