Supplemental Figure Legends

Supplemental Figure S1. Leaf green-color quantification of *Osfc24* mutant. (A) Leaf phenotype at heading stage. (B) Color quantification. Error bars represent mean \pm SD (three biological replicates) with Student's *t*-test for significant difference, $n \geq 10$ leaves in were measured in each replicate. The rate (%) calculated by subtraction of values between the WT and *Osfc24* divided by the WT value. Scale bar indicates 2 cm in (A).

Supplemental Figure S2. Genetic complementation test of rice brittleness mutant *Osfc24* by *pFC24F*. (A) Plant height; (B) Tiller number; (C) Breaking force; (D) extension force of 2nd internode at heading stage (E) Cell wall compositions of mature plants of wild type (WT) and *pFC24F*. Error bars represent mean \pm SD (three biological replicates) with Student's *t*-test for significant difference, $n \geq 20$ plants in (A-D) were measured in each replicate.

Supplemental Figure S3. Protein sequence alignment of the UGE protein family in rice and *Arabidopsis*. Green asterisk represents the mutated amino acid site.

Supplemental Figure S4. Prediction of OsUGE2 protein domain by TMHMM2.0 program.

Supplemental Figure S5. Transcriptional analysis of *OsUGEs* and *OsPHD1* genes in stems tissues of the *Osfc24* mutant. *Ubiquitin* gene used as internal standard. Error bars represent mean \pm SD (three biological replicates). ***P* < 0.01 by Student's *t*-test.

Supplemental Figure S6. UGE activity in stem tissues of the *Osfc24* mutant. Error bars represent mean \pm SD (three biological replicates). ***P* < 0.01 by Student's *t*-test. The rate (%) calculated by subtraction of values between the WT and *Osfc24* divided by the WT value.

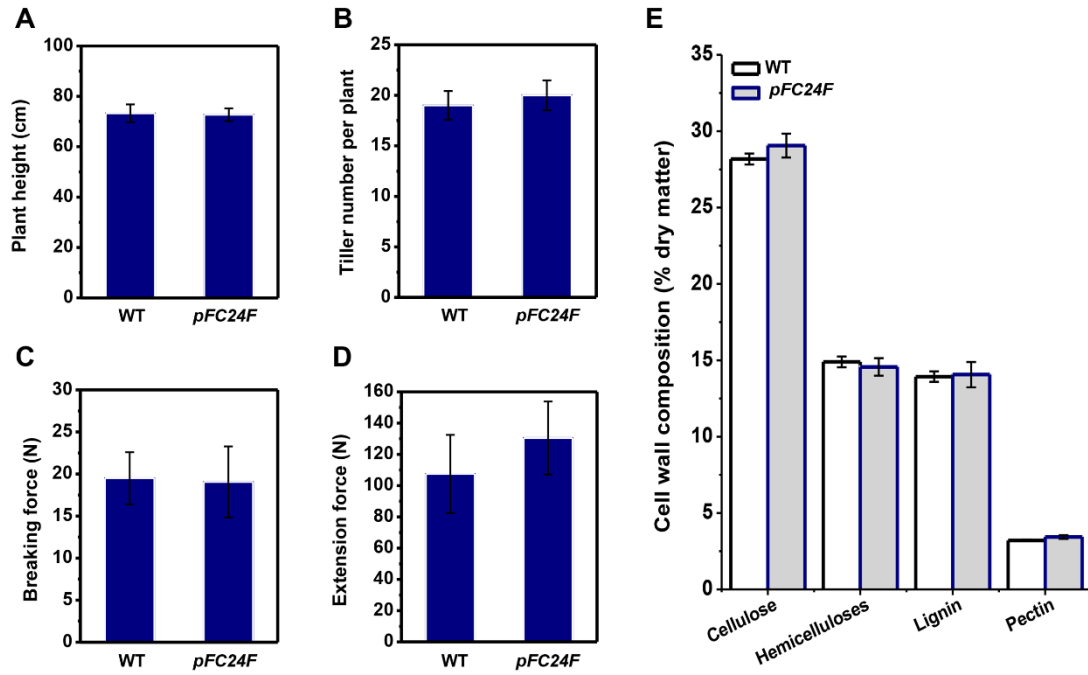

Supplemental Figure S7. Stomatal conductance and transpiration rate in the *Osfc24*

mutant. Values represent means \pm SD, n = 12. ****** $P < 0.01$ by t-test.

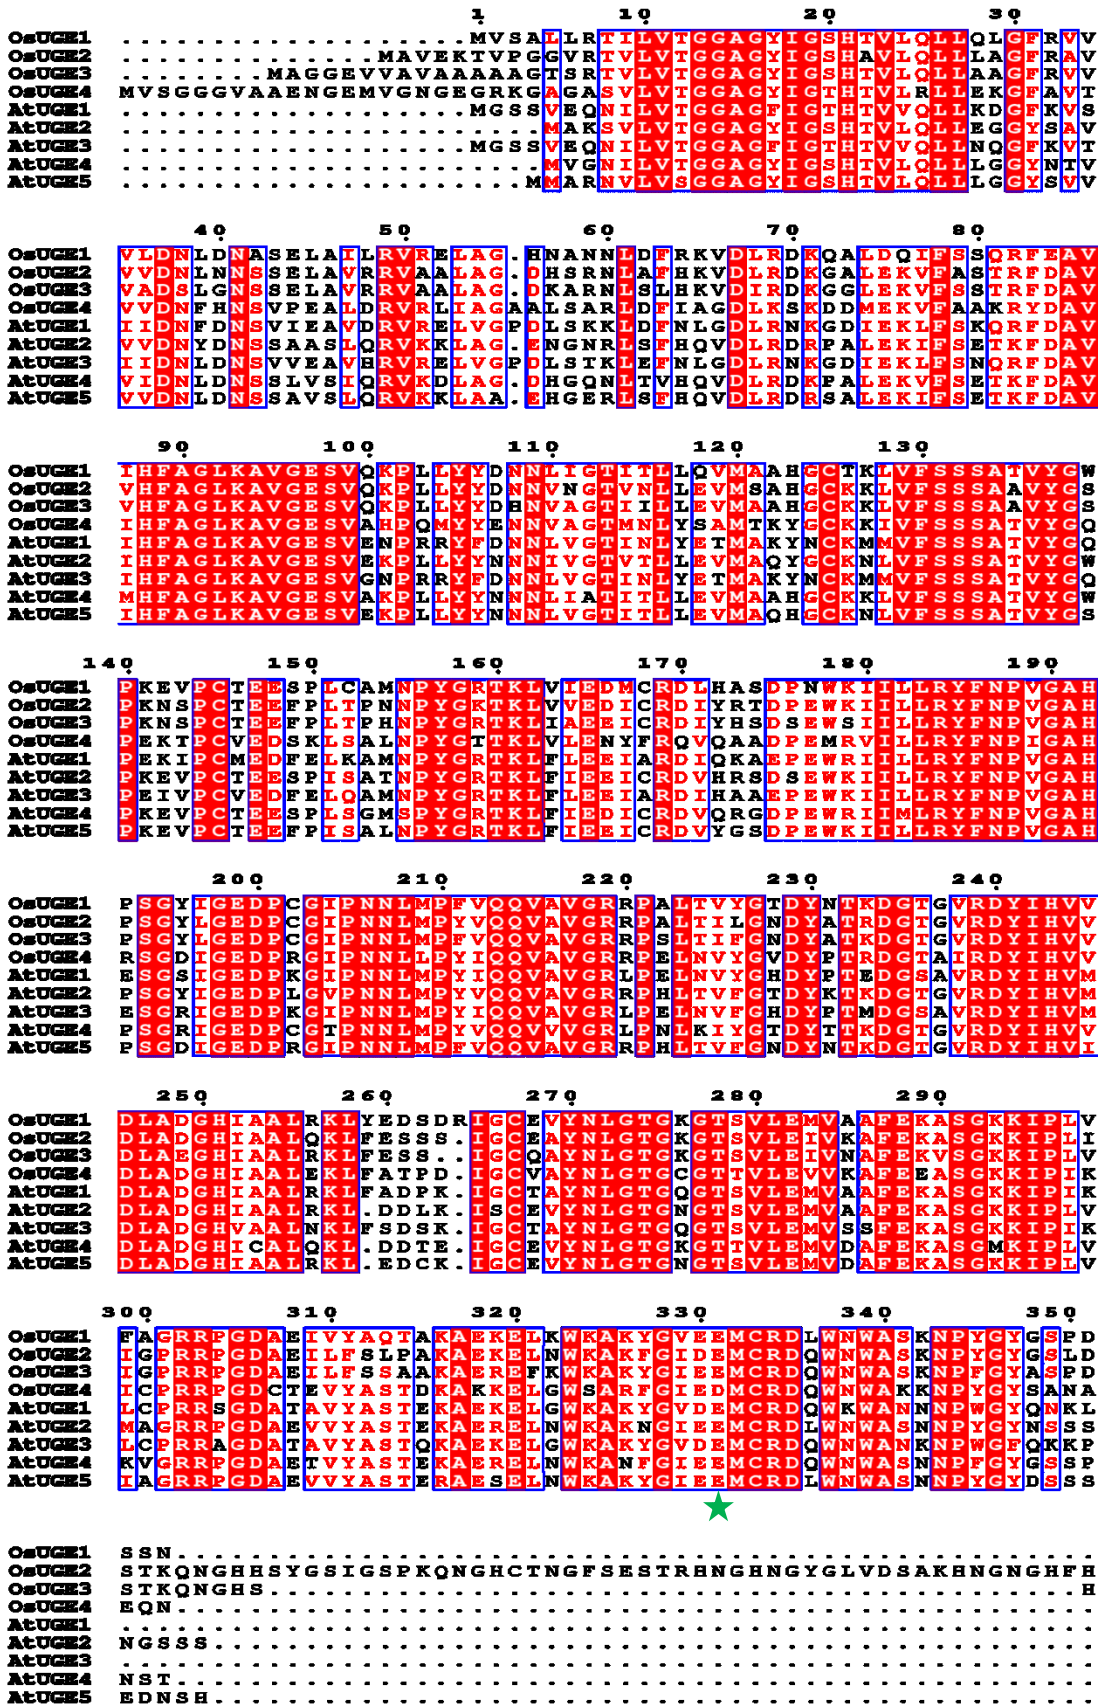

Supplemental Figure S8. Transcriptional analysis of *OsCESAs* in young root tissues of the WT under Yariv treatment. (A) Germinated seeds were treated with β -glucosyl Yariv reagent (50 μ M) for 5 days. (B) Fold of change on *OsCESAs* after Yariv treatment. *Ubiquitin* gene used as internal standard. Error bars represent mean \pm SD (three biological replicates). ****** $P < 0.01$ by Student's t-test.
