

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Individual-level variables used in the analyses of the likelihood to respond first to the stimulus.

File Name: Supplementary Data 2

Description: Group-level variables used in the analyses of the latency to first respond to the stimulus and collective visual field data.

File Name: Supplementary Data 3

Description: Variables used in the analyses of the latency to arrive at the stimulus.

File Name: Supplementary Data 4

Description: Individual-level variables used in the analysis of the heading angle to nearest neighbours.

File Name: Supplementary Data 5

Description: Data on food item consumption.

File Name: Supplementary Movie 1

Description: Examples of responses to the stimulus from groups with low levels of collective order and high levels of collective order.

File Name: Supplementary Movie 2

Description: Illustration of the effects of different levels of collective order for the proportion of the arena within the visual range of a group based on a binocular (30°) field of view.
