

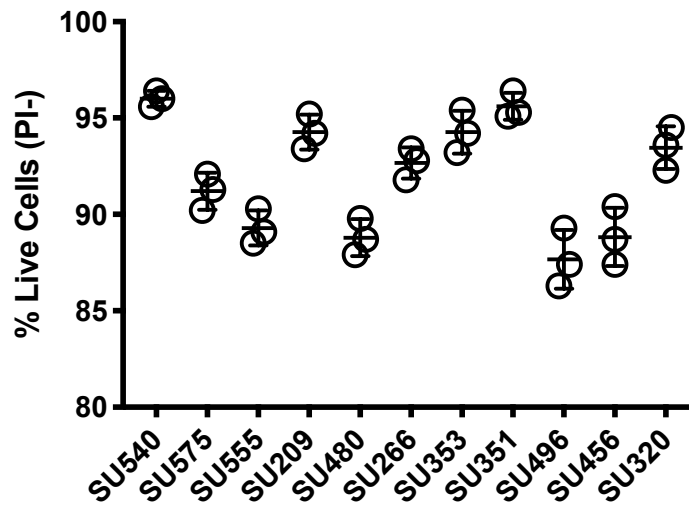

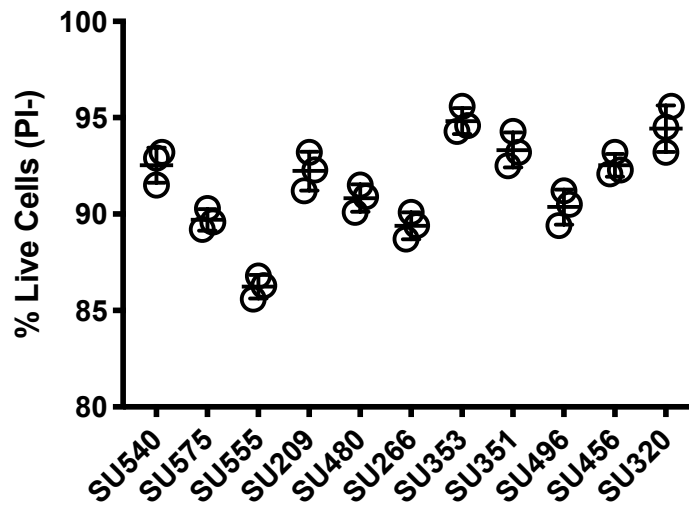

Fig. S15. Viability of primary AML cells.

A.

B.

Viability of human AML in culture. (A) Percentages of live (PI⁻) human AML cells in culture (14-21 days). (B) Percentages of live (PI⁻) human AML blasts flow purified as described at the end of 72 h culture in SFEM supplemented with TPO, SCF, and FLT3L for generation of conditioned medium.
