Figure S2. Phylogeny of sampled birds on ALVE genotype. Branches have been coloured by country to match Figure 2: Ethiopia in black, Iraq in red, Nigeria in blue. Individual samples are labelled with regional codes as detailed in AF1 and the individual sequencing ID. Nigerian samples do not cluster by regional geography, but many Ethiopian samples do. The Iraqi samples cluster within the Ethiopian clade, as suggested by Figure 2. Dendrogram constructed with average linkage using the Jaccard distance metric.
