Supplementary material S3. Western blot analysis

Supplementary material S4. Standard curve and raw data example

Supplementary material S3.

M = Proteinmarker

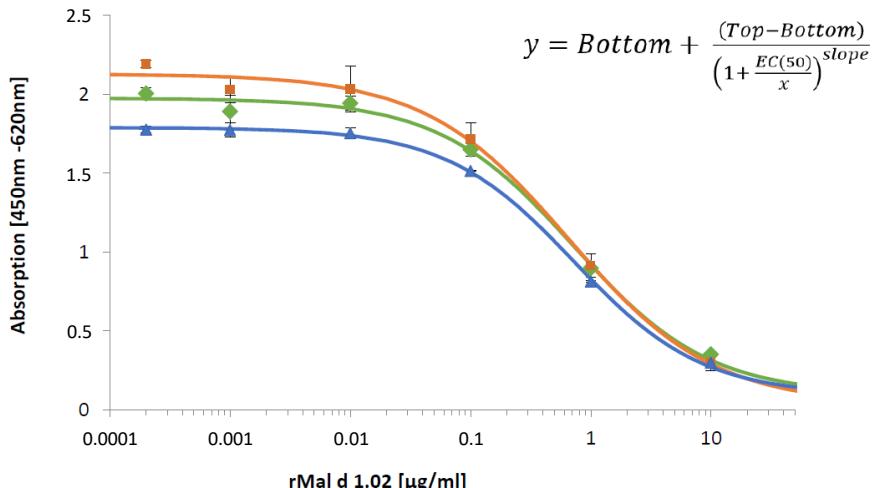

1 = Mal d 1
2 = Pru d 1
3 = Bet v 1
4 = Fra a 1 } 3.5 µg / line

1st antibody: polyclonal rabbit-anti- Mal d 1
c = 2.5 µg/mL

2nd antibody: goat-anti-rabbit-AP

Western blot analysis of Mal d 1.02 (Q8L6K9), Pru d 1 (B5KVN9), Bet v 1 a (P15494), and Fra 1.02 (QET923) using the antibody raised against Mal d 1. Experimental details [35]. Prestained marker proteins were used.

Supplementary material S4.

Standard curves of rMal d 1 calculated with the 4-parameter fit. On each ELISA-plate, a standard curve of serial diluted rMal d 1.02 in triplicates were performed to adjust inter-assay variations.

ELISA - Raw data of three exemplary apple genotypes with calculated Mal d 1 concentrations.

Samples were used undiluted and diluted 1:2 in PBS-buffer to fit the linear range of the standard curve. For more details, see Materials and Methods. The prefix p indicates the genotypes of the crossbreeding population. Each line represents one measurement.

Sample	Raw data (OD _{450nm})	Raw data (OD _{620nm})	Absorption (blank corrected) (450 nm – 620 nm)	4-Parameter fit incl. dilution factor (µg/mL) = concentration in extract	Concentration Mal d 1 (µg/g FW) = concentration in apples
