

**Supplementary Table 2.** A complete list of BA and SCFA analytes along with their chemical structure, LC retention time, and exact mass.

| Name                             | Chemical structure | Retention time (min) | Monoisotopic mass | Ion                   |
|----------------------------------|--------------------|----------------------|-------------------|-----------------------|
| Tauro-cholic acid                |                    | 5.49                 | 514.28            | [M-H] <sup>-</sup>    |
| Tauro-chenodeoxycholic acid      |                    | 6.37                 | 498.29            | [M-H] <sup>-</sup>    |
| Tauro-ursodeoxycholic acid       |                    | 5.48                 | 498.29            | [M-H] <sup>-</sup>    |
| Tauro- $\alpha$ -muricholic acid |                    | 4.44                 | 514.28            | [M-H] <sup>-</sup>    |
| Tauro- $\beta$ -muricholic acid  |                    | 4.61                 | 514.28            | [M-H] <sup>-</sup>    |
| Cholic acid                      |                    | 7.13                 | 453.29            | [M+HCOO] <sup>-</sup> |
| Chenodeoxycholic acid            |                    | 8.03                 | 437.29            | [M+HCOO] <sup>-</sup> |
