

Supplementary Table 1: Chemical structures and absorption wavelengths of various photosensitizers utilized for active targeted PDT treatment of breast cancer

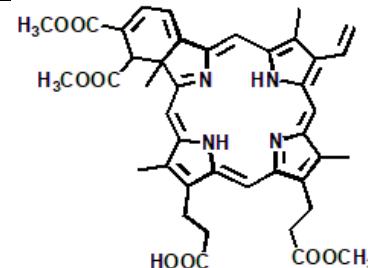

Type of PS	PS	Absorption wavelength (nm)	Chemical structure	Ref.
BODIPY-type	Boron dipyrromethene (BODIPY)	665		[1, 2]
	Chlorin e6 (Ce6)	670		[3]
Chlorines	(2-[1-hexyloxyethyl]-2-devinyl pyropheophorbide-alpha (HPPH))	665		[4]

	IR820 dye	819		[5]
Cyanines	Merocyanin 540 (MC 540)	540		[6]
	Indocyanine green (ICG)	780		[7]
Dye-type	Methylene blue succinimidyl ester (MB-SE)	666		[8]

Herbal extracts	Pheophorbide A (PheoA)	667		[9]
Metallophthalocyanines	Zinc phthalocyanine (ZnPc)	674		[10]
Nanostructured metal oxides	TiO ₂ NPs	423		[11]
Porphyrins	Protoporphyrin IX (PpIX)	635		[12]

Benzoporphyrin
derivative
monoacid (BPD)

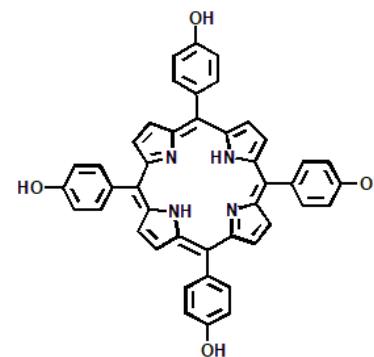

690

[13]

5,10,15,20-
tetrakis(4-
hydroxyphenyl)-
21H,23H-
porphyrin (tHPP)

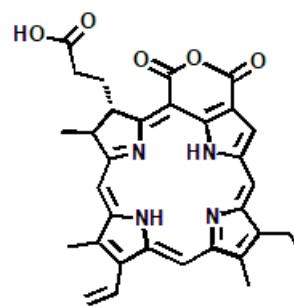

420

[14]

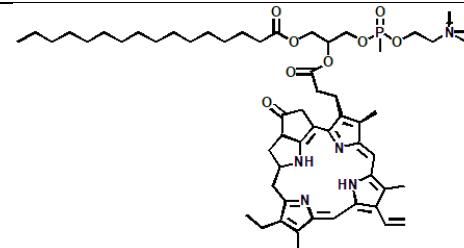

Purpurin-18

699

[15]

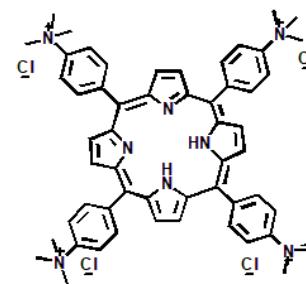

Pyrolipid 665

[16]

Meso-tetra-(4-
N,N,N,-
trimethylaniliniu
m)-porphine
(TMAP)

630

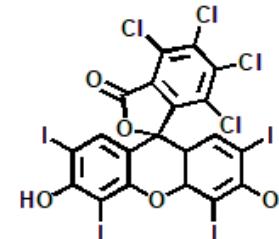

[17, 18]

Xanthenes

Rose bengal
(RB)

562

[19]
