							3,16 ± 0,06 <sup>1</sup>	232,20 ± 47,48 <sup>1</sup>	148,39 ± 21,37 <sup>1</sup>	277,06 ± 43,10 <sup>1</sup>	217,92 ± 42,84 <sup>1</sup>

<sup>1</sup> Data are presented as mean ± SE.

**Table S2.** Pairwise comparisons of cortisol concentrations at different sampling points (before mating, after parturition, 4 weeks of lactation and 8 weeks of lactation) in the domestic cat females.

Contrast	Estimate	SE	t-ratio	p-value
before mating – after parturition	0.056	0.073	0.761	0.4486
before mating – 4 weeks of lactation	-0.176	0.073	-2.427	<b>0.0173</b>
before mating – 8 weeks of lactation	-0.029	0.073	-0.395	0.6938
after parturition – 4 weeks of lactation	-0.232	0.067	-3.483	<b>0.0008</b>
after parturition – 8 weeks of lactation	-0.084	0.067	-1.263	0.2101
4 weeks of lactation – 8 weeks of lactation	0.148	0.067	2.22	<b>0.0292</b>

Results of post-hoc comparisons are presented. Cortisol concentrations are log-transformed. Results are averaged over the levels of litter size.

**Table 3.** Pairwise comparisons of cortisol concentrations between the domestic cat females with small and large litters at different sampling points (before mating, after parturition, 4 weeks of lactation and 8 weeks of lactation).

Sample point	Contrast	Estimate	SE	t-ratio	p-value
before mating	large – small	-0.124	0.123	-1.008	0.316
after parturition	large – small	-0.023	0.109	-0.214	0.831
4 weeks of lactation	large – small	-0.198	0.109	-1.822	0.0719
8 weeks of lactation	large – small	-0.064	0.109	-0.587	0.5588

Results of post-hoc comparisons are shown. Cortisol concentrations are log-transformed.

**Table S4.** Pairwise comparisons of cortisol concentrations at different sampling points (before mating, after parturition, 4 weeks of lactation and 8 weeks of lactation) in the domestic cat females with small and large litters.

Contrasts	Females with large litters				Females with small litters			
	$\beta$	SE	t-ratio	p-value	$\beta$	SE	t-ratio	p-value
before mating –after parturition	0.012	0.099	0.125	0.9006	0.113	0.108	1.048	0.2977
before mating – 4 weeks of lactation	-0.148	0.099	-1.492	0.1394	-0.222	0.108	-2.054	0.0432
before mating – 8 weeks of lactation	-0.055	0.099	-0.555	0.5802	0.005	0.108	0.049	0.9613
after parturition – 4 weeks of lactation	-0.161	0.087	-1.843	0.069	-0.336	0.105	-3.195	0.002
after parturition – 8 weeks of lactation	-0.068	0.087	-0.776	0.4403	-0.108	0.105	-1.03	0.3063
4 weeks of lactation – 8 weeks of lactation	0.09	0.087	1.068	0.2888	0.227	0.105	2.166	0.0333

Results of post-hoc comparisons are shown. Cortisol concentrations are log-transformed.  $\beta$  refers to the model estimate.

**Table S5.** Pairwise comparisons of cortisol concentrations between the domestic cat females with different number of kittens per litter.

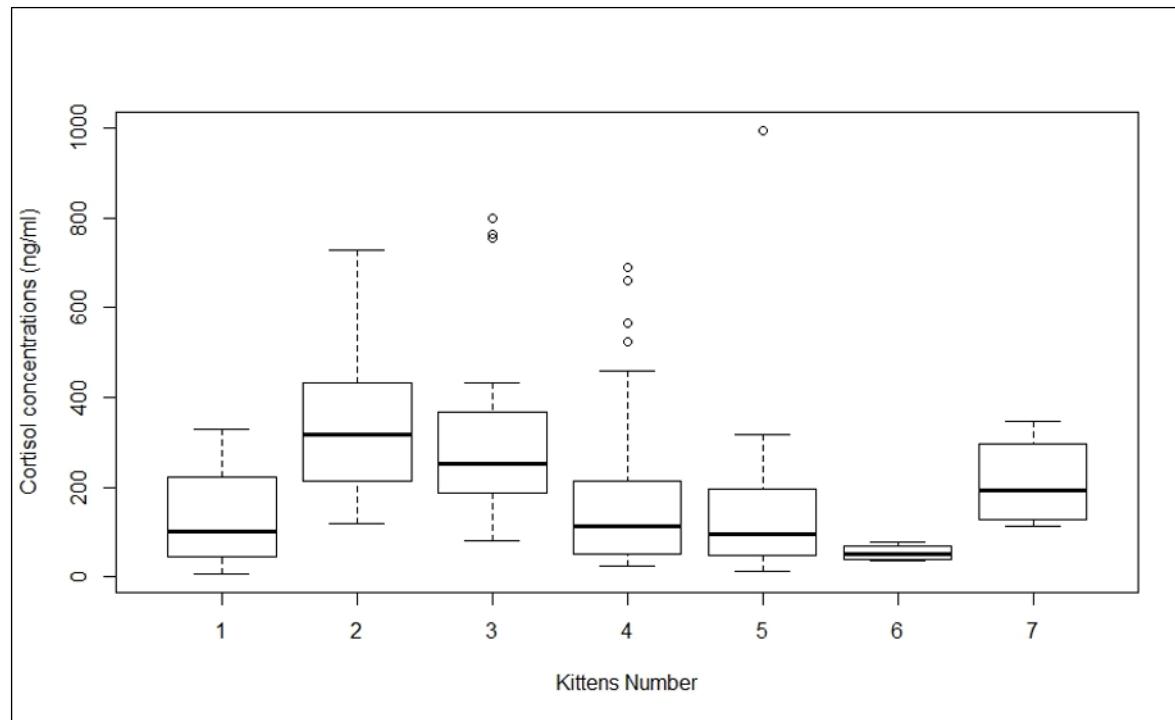

Contrast	Estimate	SE	t-ratio	p-value
1 – 2	-0.406	0.22	-1.843	0.0701
