

**Table S1:** Antibodies and reagents used

Antibody	Company	Catalog No	Host Species
Anti-CD44-APC	Thermofisher	MA1-10226	Mouse
Anti-CD24-PerCP-eFluor 710	Thermofisher	46-0247-42	Mouse
Primary anti-CD44	Abcam	ab157107	Rabbit
Primary anti-CD24	Abcam	ab202073	Rabbit
Primary Anti-ALDH1A3	Abcam	ab129815	Rabbit
Anti-ALDH1A1- Alexa Fluor 488	Abcam	ab195254	Rabbit
Primary Anti-NANOG	Abcam	ab109250	Rabbit
Anti-KI67-Alexa Fluor 647	Abcam	ab196907	Rabbit
Secondary- Goat anti-rabbit FITC	Jackson ImmunoResearch	111-095-003	Goat
Secondary- Goat anti-rabbit TRITC	Jackson ImmunoResearch	111-025-003	Goat
Reagent			
Penicillin-Streptomycin,-100X	ThermoFischer	15140-122	
B27 supplement -50x	Gibco	17504-044	
Fibroblast growth factor	Gibco	PHG0314	
Epidermal growth factor	Gibco	PHG0314	
D-MEM/F-12	Gibco	12500-039	

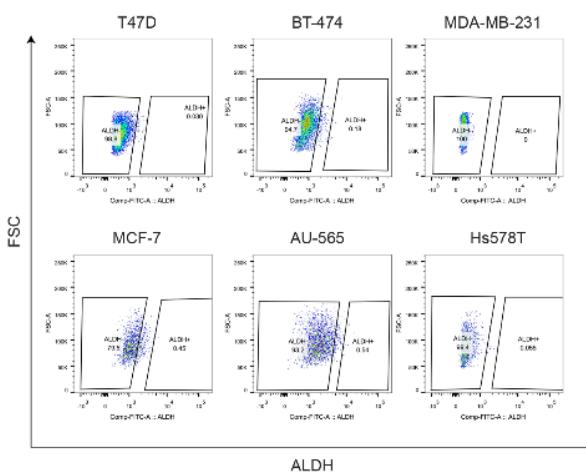

**Table S2:** Primers used for qRT-PCR

A

B

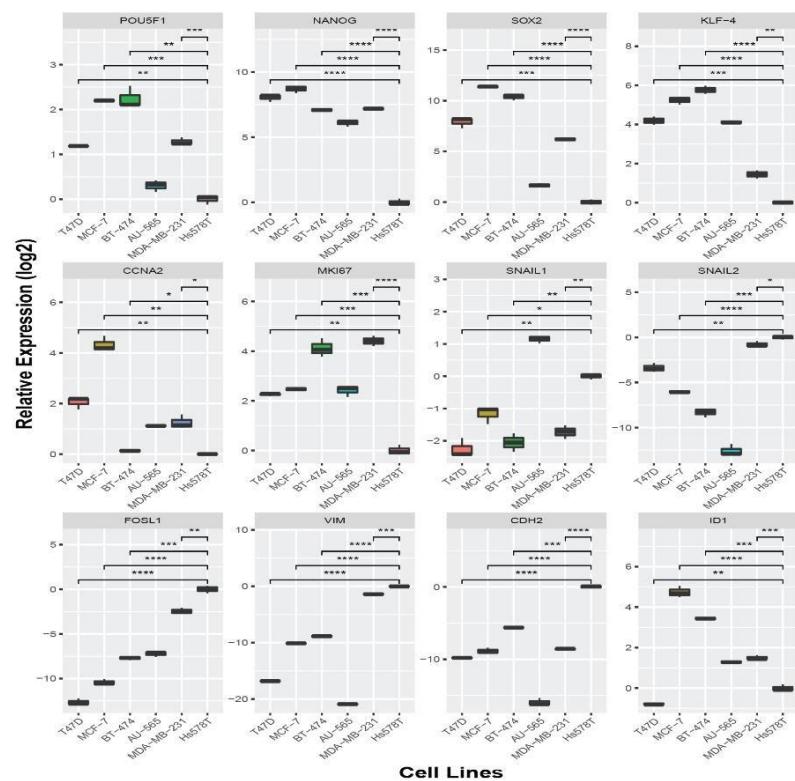

**Figure S1:** Gating strategy to isolate ALDH<sup>br</sup>, CD44<sup>high</sup>/CD24<sup>-/low</sup> and CD44<sup>-/low</sup>/CD24<sup>-/low</sup> populations (A). ALDH<sup>br</sup> cells were the highest in HER2-OE cell lines BT-474 (~20%) and AU-565 (~6%); CD44<sup>-/low</sup>/CD24<sup>-/low</sup> in luminal T47D (~64%), MCF-7 (57%), BT-474 (~59%) and CD44<sup>high</sup>/CD24<sup>-/low</sup> in triple negative cell lines Mda-MB-231 and Hs578T (~99%). Gating were set to DEAB inhibitor control (B).

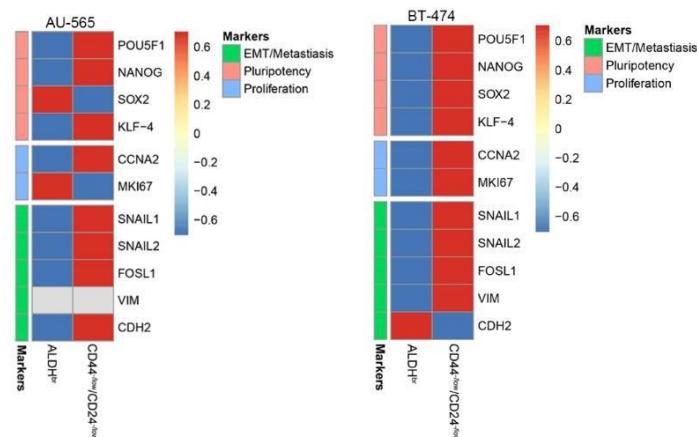

**Figure S2:** Luminal CD44<sup>-/low</sup>/CD24<sup>-/low</sup> cells form tightly packed spheres

(A). Representative images of primary mammospheres grown in serum deficient DMEM medium after 7 days. All subpopulations formed discernable spheres by day 4 of culture. Luminal (T47D, MCF-7 and BT-474) spheres consist cells more tightly packed together. Triple negative (MDA-MB-231, Hs578T) and AU-565 cell lines formed aggregates of loosely packed cells. Scale bar = 100  $\mu$ m. Sphere size comparison of CD44<sup>-/low</sup>/CD24<sup>-/low</sup>, CD44<sup>high</sup>/CD24<sup>-/low</sup> and ALDH<sup>br</sup> cell after 7 days in culture (B). CD44<sup>high</sup>/CD24<sup>-/low</sup> cells from MDA-MB-231 formed the biggest aggregate spheres. CD44<sup>-/low</sup>/CD24<sup>-/low</sup> cells from MCF-7 and BT-474 formed significantly larger spheres than CD44<sup>high</sup>/CD24<sup>-/low</sup> and ALDH<sup>br</sup> cells from AU-565 and hs578T cell lines.). The data represent the mean  $\pm$  S.D. from three independent experiments performed in triplicate. \* $P < 0.05$ , \*\* $P < 0.01$

A

**Figure S3:** Relative expression of markers for pluripotency, proliferation and EMT/metastasis

(A)  $CD44^{-/low}/CD24^{-/low}$  luminal cells show overexpression of metastasis and proliferation marker but low expression of EMT markers compared to  $CD44^{high}/CD24^{-/low}$  cells from triple negative cell line Hs578T. Both the triple negative cell lines show comparable expression of EMT genes. Hs578T has significantly lower expression of NANOG and MKI-67. (B)  $CD44^{-/low}/CD24^{-/low}$  cells from both HER2-OE cell lines BT-474 and AU-565 show marginal overexpression of metastasis, proliferation and EMT markers comparative to  $ALDH^{br}$  cells from their respective cell lines. All comparisons relative to bulk gene expression of respective cell lines. The data represents relative fold change ( $\log_2$ ) from three independent experiments. Fold change relative to Hs578T expression. \* $P<0.05$ , \*\* $P<0.01$ , \*\*\* $P<0.001$ , \*\*\*\* $P<0.0001$
