

Figure S1. miR-15a-5p inhibitor partially reverses the effects of vitamin D3 on the proliferation of Hep3B and HepG2 cells. (A) MTT assay of Hep3B cells transfected with the miR-15a-5p inhibitor or inhibitor-ctrl after vitamin D3 treatment. (B) MTT assay of HepG2 cells transfected with the miR-15a-5p inhibitor or inhibitor-ctrl treated with vitamin D3. miR, microRNA; D3, vitamin D3; inhibitor-ctrl, inhibitor-control; OD, optical density. *P<0.05 and **P<0.01 vs. DMSO + inhibitor-ctrl.
