

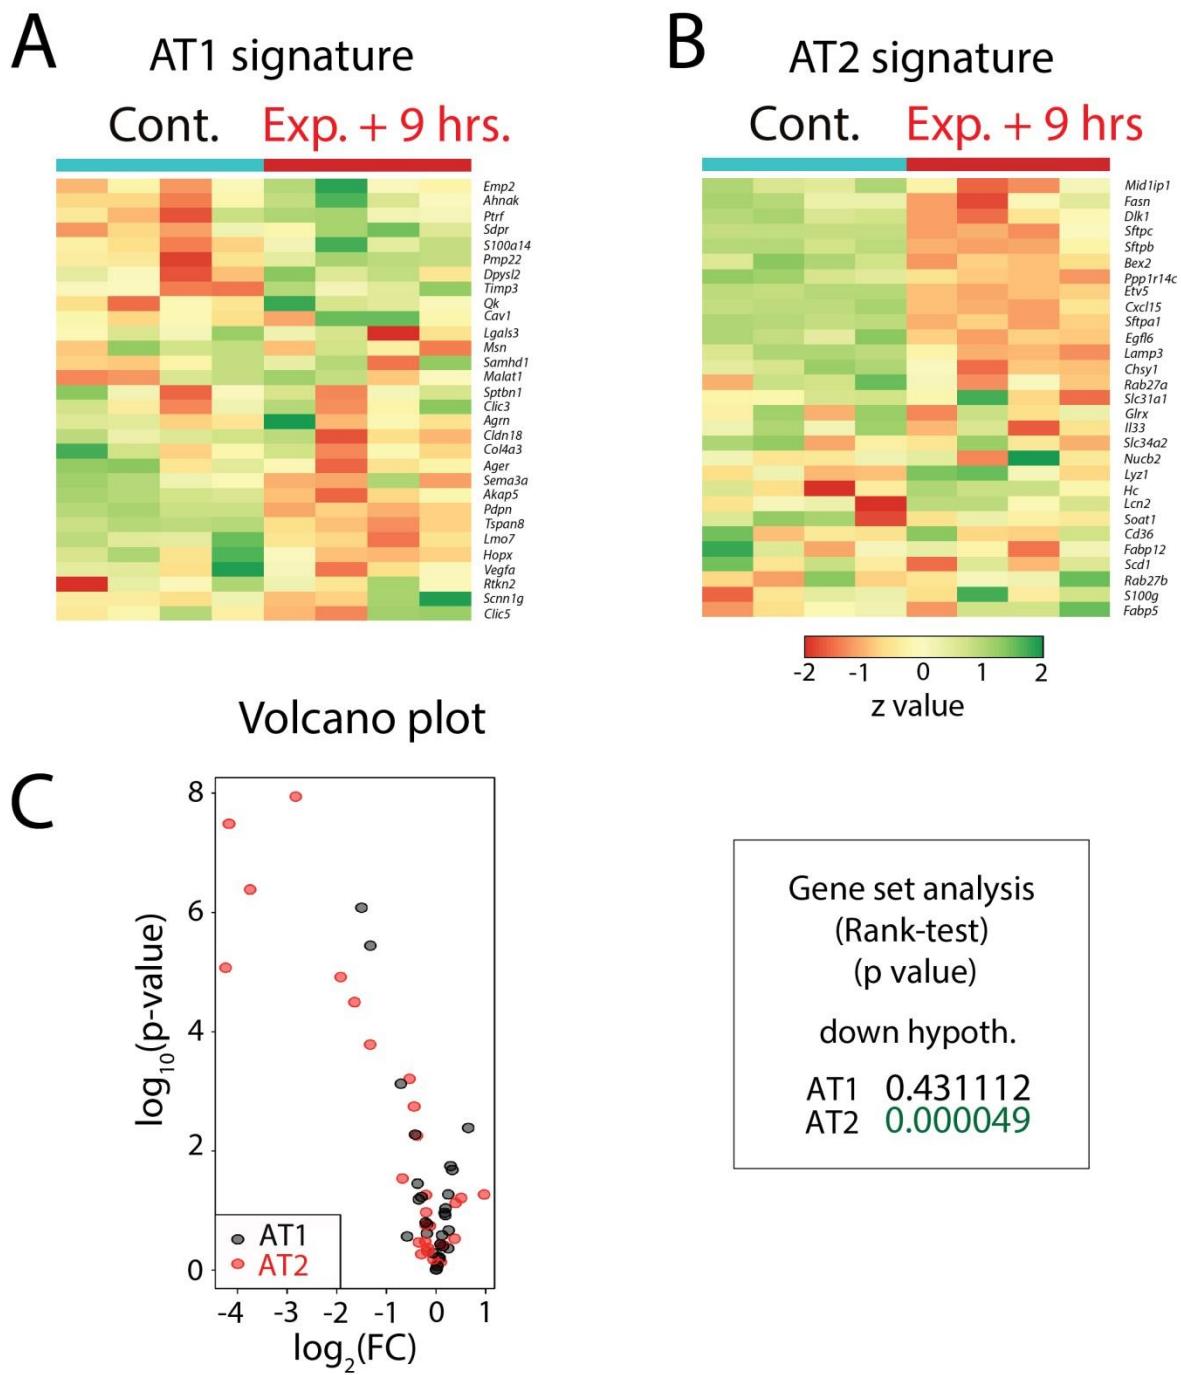

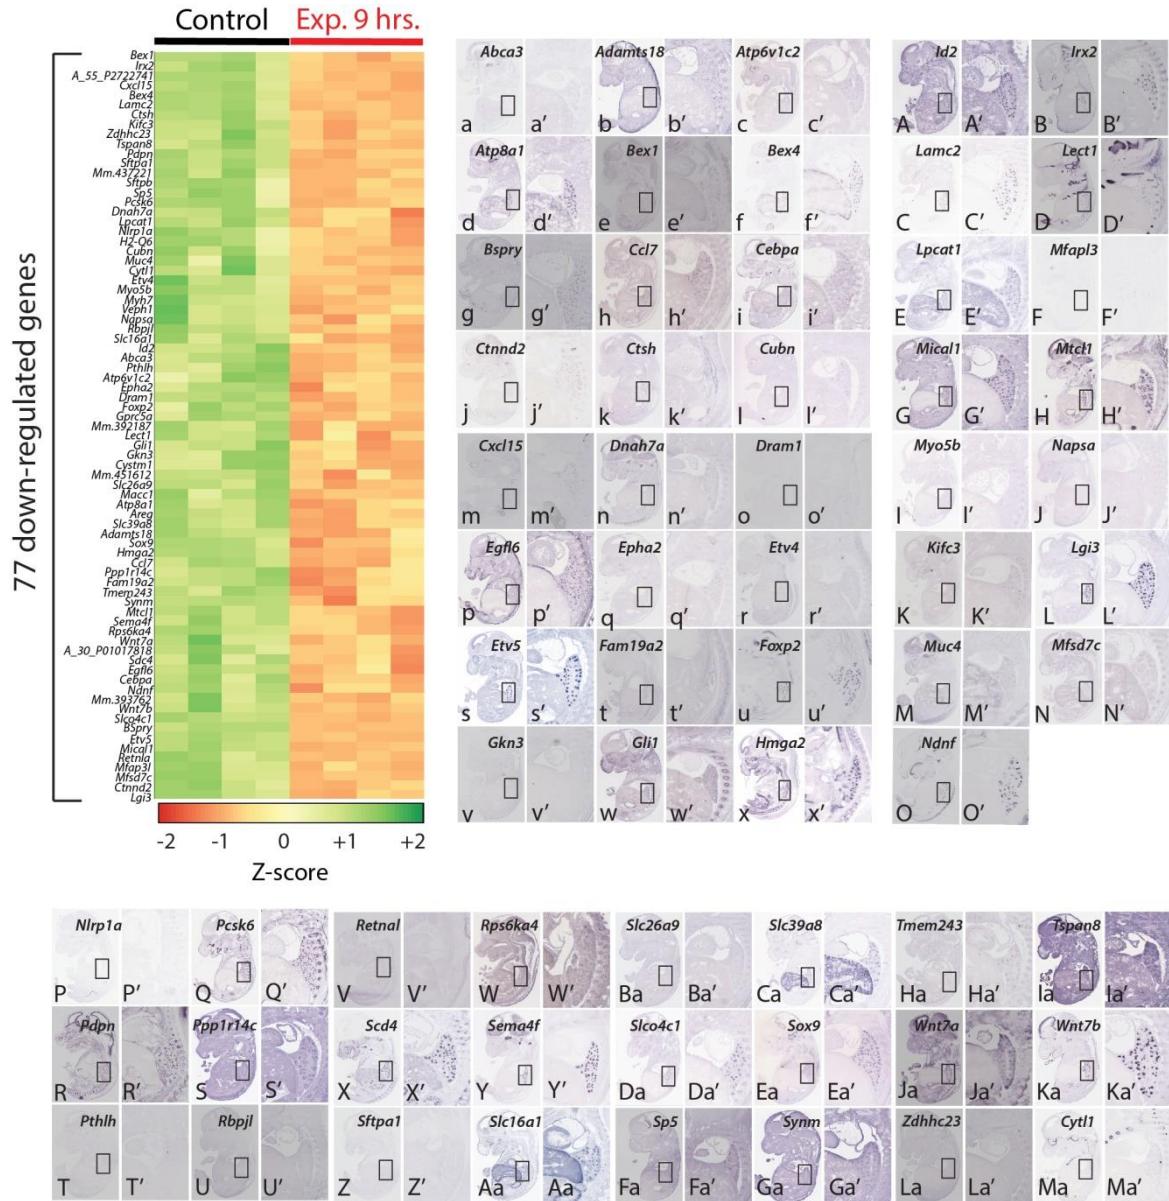

**Figure S1: Enlarged heatmap from Figure 1D showing the top 100 regulated genes (according to p-value) from E14.5 + 9 hours gene array.**

**Figure S2: Experimental lungs (E14.5 + 9 hrs.) display impaired AT2, but not AT1, differentiation. (A) Heatmap for the AT1 and (B) AT2 gene signature using the E14.5 + 9 hrs. experimental and control lungs. (C) Corresponding volcano plot and (D) gene set analysis showing a significant downregulation of the AT2 ( $p=0.000049$ ), but not the AT1, signature.**

**Figure S3: Expression patterns of genes directly regulated after 9 hours by Fgfr2b signaling in E14.5 lungs.** (A) Heatmap for the 77 genes downregulated from the top 100 regulated genes, constituting the Fgfr2b ligands signature at E14.5. (B) Corresponding *in situ* hybridization expression patterns for the identified genes (from 'Genepaint').
