

Fig.S2 (A) A graph showing average size of spheres RPS6 knockdown experiments in GBM cell line (U251MG). (B) A graph showing average size of Empty control vector (Control) or RPS6-expressing plasmid vector (OE-RPS6) was transfected into U251MG. (C) A graph showing average size of Control or OE-RPS6 was transfected into U251MG treatment with Mock or AG490. (values are presented as mean \pm SD of triplicate samples $p^* < 0.05$, $p^{**} < 0.01$).
