

Supplemental data

Table S1. BioID and mass spectrometry of FAZ27-BirA*-HA-induced cells (+Tet). Shown are the proteins identified by mass spectrometry analysis of the biotinylated proteins purified from cells expressing FAZ27-BirA*-HA.

[Click here to Download Table S1](#)

Table S2. BioID and mass spectrometry of FAZ27-BirA*-HA non-induced control cells (-Tet). Shown are the proteins identified by mass spectrometry analysis of the biotinylated proteins purified from non-induced control cells.

Table S3. Putative FAZ27 interacting proteins and near neighbors identified by BioID and mass spectrometry. Shown is the list of proteins identified by mass spectrometry analysis of the biotinylated proteins purified from cells expressing FAZ27-BirA*-HA after exclusion of the proteins identified from the non-induced control and the known ribosomal protein contaminants.
