Supplemental Material

Fine Particulate Matter and Poor Cognitive Function among Chinese Older Adults: Evidence from a Community-Based, 12-Year Prospective Cohort Study

Jiaonan Wang, Tiantian Li, Yuebin Lv, Virginia Byers Kraus, Yi Zhang, Chen Mao, Zhaoxue Yin, Wanying Shi, Jinhui Zhou, Tongzhang Zheng, Patrick L. Kinney, John Ji, Song Tang, and Xiaoming Shi

Table of Contents

Table S1. The differences in characteristics between men and women.

Table S2. The correlation matrix of individual-level PM_{2.5} exposure from the year of 2002 to 2014.

Figure S1. The distribution of PM_{2.5} over the entire study period from 2002 to 2014.

Table S3. The association of PM_{2.5} and poor cognitive function (MMSE<18) in crude models or in model adjusted for age among Chinese older adults aged 65 years and older.

Table S4. Sensitivity analyses: The association of PM_{2.5} and poor cognitive function (MMSE<18) after excluding deaths in the first year or removing participants lost to follow up among Chinese older adults aged 65 years and older.
