

Supplement Fig 1

Supplement Fig 1. Effect of UFL1 decreased on cell proliferation in mouse mammary.

(A) The expression of CyclinD1 were detected by western blot in mammary gland of UFL1 KO mice. The relative intensity of A was plotted in B. (C and D) After HC11 cells were transfected by siUFL1 and control siRNA, the level of UFL1 were analyzed by western blot. Different letters indicate significant difference ($P < 0.05$).
