| <b>Supplementary Tables .....</b>  | <b>4</b> |
| 1. Supplementary Table 1. Descriptive statistics at T1 for one twin randomly selected from each pair.....  | 4        |
| 2. Supplementary Table 2. Descriptive statistics at T2 for one twin randomly selected from each pair.....  | 6        |
| 3. Supplementary Table 3. Descriptive statistics for T1 to T2 differences for one twin randomly selected from each pair.....   | 9        |
| 4. Supplementary Table 4. Descriptive statistics for T1 for one twin randomly selected from each pair broken down by zygosity. ....  | 11       |
| 5. Supplementary Table 5. Descriptive statistics for T2 for one twin randomly selected from each pair broken down by zygosity. ....  | 13       |
| 6. Supplementary Table 6. Descriptive statistics for T1 to T2 differences for one twin randomly selected from each pair broken down by zygosity. ....  | 15       |
| 7. Supplementary Table 7. Descriptive statistics at T1 for the twin that was not randomly selected from each pair in the main analyses. ....   | 17       |
| 8. Supplementary Table 8. Descriptive statistics at T2 for twin two randomly selected from each pair.....  | 20       |
| 9. Supplementary Table 9. Descriptive statistics for T1 to T2 differences for twin two randomly selected from each pair.....   | 22       |
| 10. Supplementary Table 10. Phenotypic correlations between T1 and T2 for the whole sample and split by males and females. ....  | 25       |
| 11. Supplementary Table 11. Measures, test-retest reliabilities and references. ....   | 26       |
| 12. Supplementary Table 12. Twin intraclass correlations and Falconer ACE estimates. ....  | 29       |
| 13. Supplementary Table 13. Twin intraclass correlations and Falconer ACE estimates. ....  | 30       |
| 14. Supplementary Table 14. Twin intraclass correlations and Falconer ACE estimates. ....  | 31       |
| 15. Supplementary Table 15. Whole sample model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance for variables (95% confidence intervals in parentheses)..... | 32       |
| 16. Supplementary Table 16. Bivariate Cholesky decomposition estimating the aetiology of the association between T1 (A1, C1 and E1) and T2 (A2, C2 and E2), for variable in the relationships theme (95% confidence intervals in parentheses). ....            | 34       |
| 17. Supplementary Table 17. Bivariate Cholesky decomposition estimating the aetiology of the association between T1 (A1, C1 and E1) and T2 (A2, C2 and E2), for variables in the thoughts and attitudes theme (95% confidence intervals in parentheses).....   | 34       |
| 18. Supplementary Table 18. Bivariate Cholesky decomposition estimating the aetiology of the association between T1 (A1, C1 and E1) and T2 (A2, C2 and E2), for variables in the substance use theme (95% confidence intervals in parentheses).....            | 36       |

|   |    |
|---|----|
| 19. Supplementary Table 19. Bivariate Cholesky decomposition estimating the aetiology of the association between T1 (A1, C1 and E1) and T2 (A2, C2 and E2), for variables in the wellbeing theme (95% confidence intervals in parentheses). .....   | 36 |
| 20. Supplementary Table 20. Bivariate Cholesky decomposition estimating the aetiology of the association between T1 (A1, C1 and E1) and T2 (A2, C2 and E2), for variables in the behaviours theme (95% confidence intervals in parentheses). .....  | 38 |
| 21. Supplementary Table 21. Bivariate model fit indices .....   | 39 |
| 22. Supplementary Table 22. For twins living together: T1 twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses).....        | 40 |
| 23. Supplementary Table 23. For twins living together: T2 twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses).....        | 42 |
| 24. Supplementary Table 24. For twins living together: T2 change twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses)..... | 43 |
| 25. Supplementary Table 25. For twins living apart: T1 twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses).....           | 45 |
| 26. Supplementary Table 26. For twins living apart: T2 twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses).....           | 46 |
| 27. Supplementary Table 27. For twins living apart: T2 change twin intraclass correlations and model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses).....    | 48 |
| 28. Supplementary Table 28. Male model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses). .....  | 50 |
| 29. Supplementary Table 29. Female model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses). .....  | 51 |
| 30. Supplementary Table 30. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses) for variables corrected for variation in SES. ....                         | 53 |
| 31. Supplementary Table 31. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses) for variables corrected for variation in job/financial difficulties. ....  | 55 |

|  |           |
|--|-----------|
| 32. Supplementary Table 32. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses) for variables corrected for variation in garden access during the lockdown. ....                                      | 56        |
| 33. Supplementary Table 33. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses) for variables corrected for variation in living conditions (number of rooms: people in home during the lockdown)..... | 58        |
| 34. Supplementary Table 34. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance (95% confidence intervals in parentheses) for variables corrected for variation in having been tested or suspected of having COVID-19. ....                     | 59        |
| 35. Supplementary Table 35. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance for variables (95% confidence intervals in parentheses) corrected for variation in number of COVID-19 symptoms. ....  | 60        |
| 36. Supplementary Table 36. Model fitting results for univariate analyses of additive genetic (A), shared environmental (C), and non-shared environmental (E) components of variance for variables (95% confidence intervals in parentheses) for variables corrected for variation in number of COVID-19 symptoms (two or more) vs none. ....        | 62        |
| <b>Supplementary Figures .....</b>   | <b>64</b> |
| 1. Supplementary Figure 1. Variance in T2 change scores.....   | 64        |
| 2. Supplementary Figure 2. Shared environmental ( $r_C$ ) and nonshared environmental correlations ( $r_E$ ). ....   | 65        |
| 3. Supplementary Figure 3. The Bivariate Cholesky decomposition.....   | 66        |

## Supplementary Tables

**Supplementary Table 1.** Descriptive statistics at T1 for one twin randomly selected from each pair.

| Construct                   | All  |      |       |          |           | Males    |      |       |          |           | Females  |      |       |          |           | ANOVA <sup>a</sup> |          |                       |

Note: Raw scores are used.

<sup>a</sup> F and p values are reported with Welch's correction (Welch, 1951) as the assumption of homogeneity of variance was violated for several variables.

**Supplementary Table 3.** Descriptive statistics for T1 to T2 differences for one twin randomly selected from each pair.

| <b>Behaviours</b> | Media use           | Media and Technology Usage and Attitudes Scale                         | 4  | .73 (video games sub-scale)<br>.82 (social media sub-scale) | Rosen, Whaling, Carrier, Cheever, & Rokkum (2013)  |
|                   | Volunteering        | Volunteering   | 3  | .84   | Adapted from page 42 of the ALSPAC questionnaire "It's all about you" at age 20: <a href="http://www.bristol.ac.uk/media-library/sites/alspac/migrated/documents/ques-yp20-all-about-you.pdf">http://www.bristol.ac.uk/media-library/sites/alspac/migrated/documents/ques-yp20-all-about-you.pdf</a> |

<sup>a</sup> More information about the variables and the references can be found in the TEDS data dictionary

([http://www.teds.ac.uk/datadictionary/studies/measures/21yr\\_measures.htm](http://www.teds.ac.uk/datadictionary/studies/measures/21yr_measures.htm)).

<sup>b</sup> Test-retest reliability figures are from T1 questionnaire construction.

<sup>c</sup> Note that measures were shortened and adapted from the referenced measures.

<sup>d</sup> Smoking and vaping measures were not included in the present analyses because too few twins endorsed them.

**Supplementary Table 12.** Twin intraclass correlations and Falconer ACE estimates.
