

Online Resource 2. Reeve Conceptual Framework

Re-published with permission, from: Reeve E, To J, Hendrix I, Shakib S, Roberts MS, Wiese MD. Patient barriers to and enablers of deprescribing: a systematic review. *Drugs Aging*. 2013;30(10):793-807. doi:10.1007/s40266-013-0106-8.

WILLINGNESS TO DEPRESCRIBE

BARRIERS

ENABLERS

Appropriateness of cessation

e.g. medication is necessary, hope for future benefit

e.g. lack of effectiveness, fear of side effects

Fear

e.g. psychological issues related to cessation, fear of return of condition, fear of withdrawal effects

Influences

e.g. physician, family, media, past experiences

Dislike of medications

e.g. inconvenience (including cost), medications are unnatural

Process of cessation

e.g. lack of GP support/time, unsure how to stop

e.g. can restart medication, support available
