

Supplementary Information, Fig. S6. PD-L1 negatively correlated with Sororin in TNBC patient tumors.

(a) Representative Immunohistochemistry (IHC) staining of PD-L1 and Sororin in the same region of a human breast cancer TMA. (b) Quantification of PD-L1 expression in non TNBC or TNBC primary breast cancer tissues. Box shows 25^{th} - 75^{th} percentiles, as well as median (center line). P<0.01 by Student's *t*-test. (c) The correlation analysis of IHC scores (1, 2 and 3) of PD-L1 and Sororin using linear regression analysis. Dot size indicates the number of cases in this group.
