

**eFigure 1.** Map of selected three prefectures in Japan.

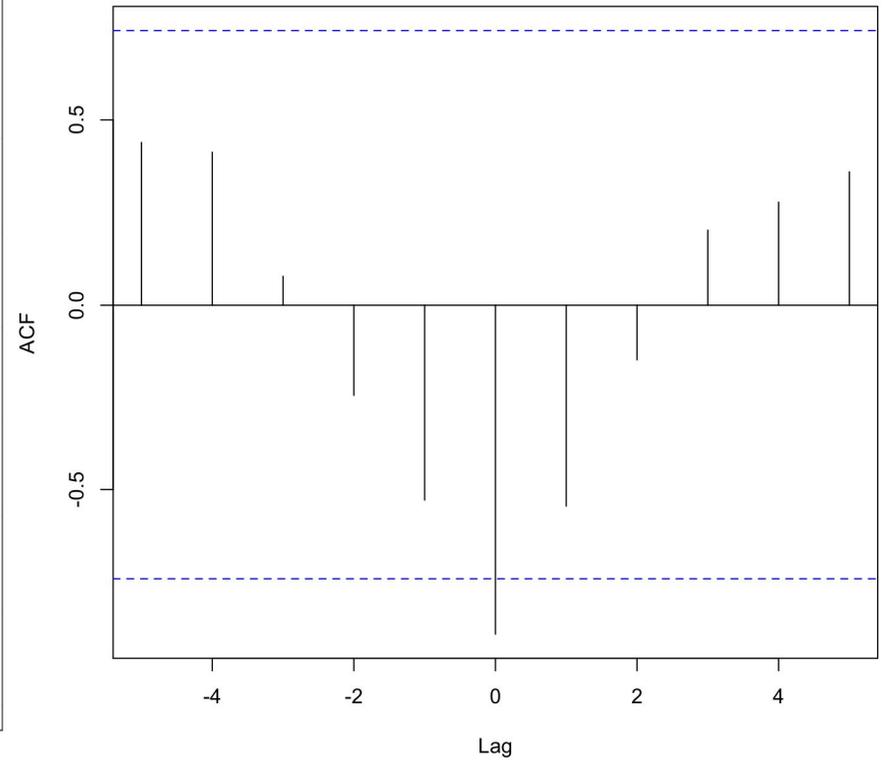

Weekly trend in the proportion of participants who have a fever

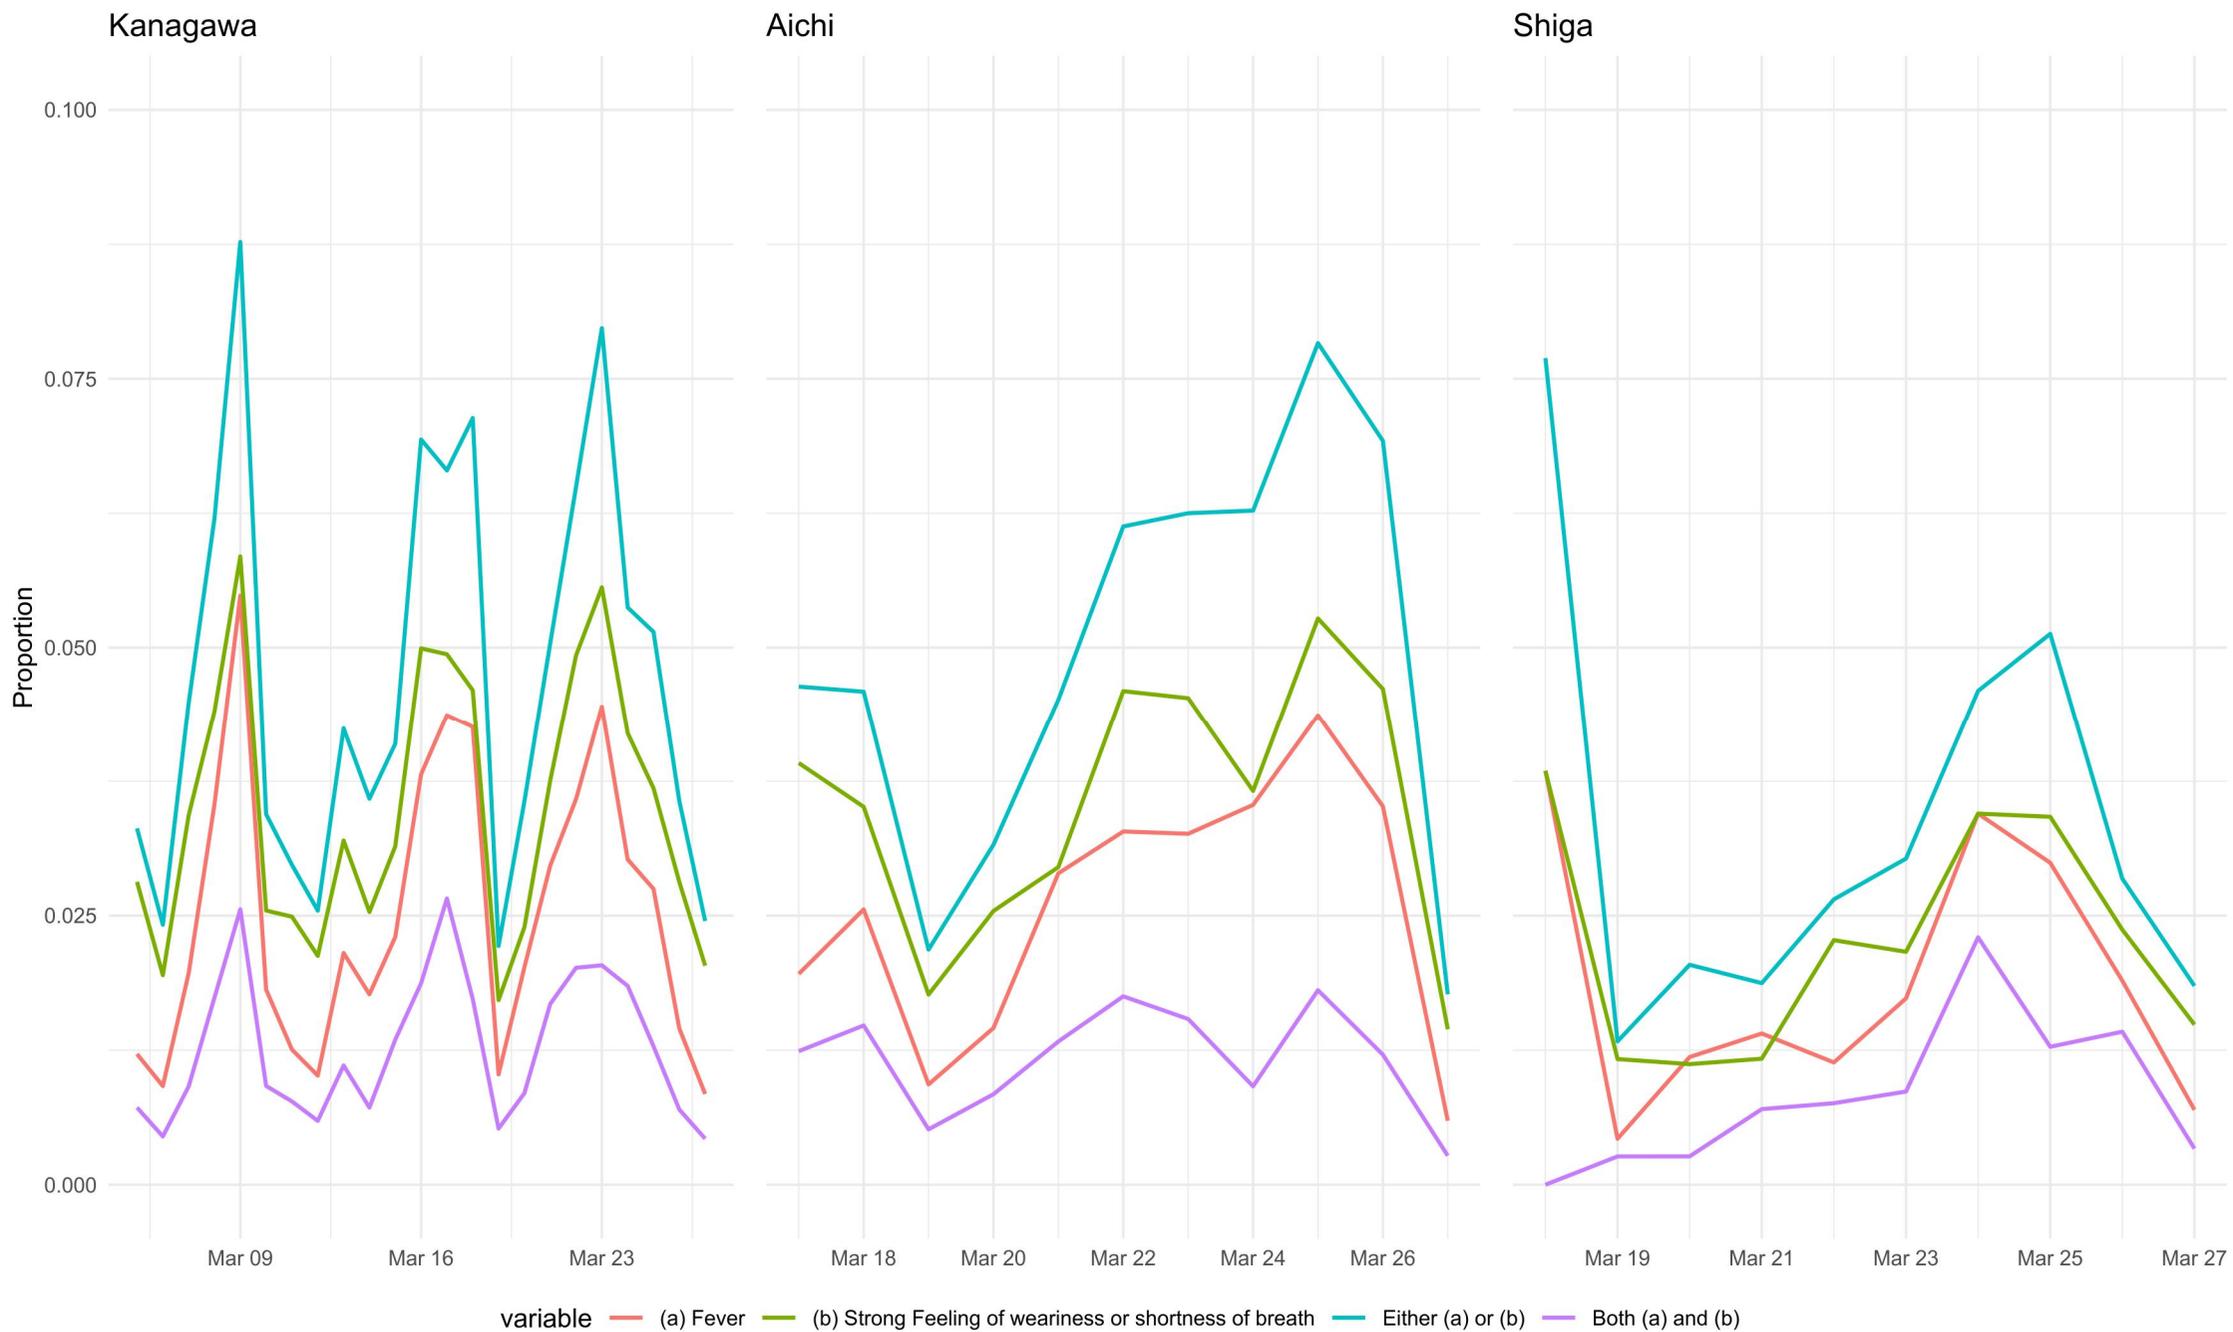

Weekly trend in the reported number of influenza cases

Cross correlation function

**eFigure 2.** Weekly trend in the proportion of participants who have a fever (left) and the reported number of influenza cases (middle) and cross correlation function between them (right). Blue line in right panel is standard deviation. ACF is autocorrelation function.

**eFigure 3.** Trend in the proportion of new participants who have non-specific symptoms in each prefecture (left: Kanagawa, middle: Aichi, right: Shiga). Red line, green line, blue line, and purple line indicate the proportion of participants who have a fever (a), a strong feeling of weariness or shortness of breath (b), both (a) and (b), and either (a) or (b), respectively.

**eTable 1.** Demographic characteristics of the participants by health states during the study period for Kanagawa, Aichi, and Shiga prefecture, as of March 30, 2020

Kanagawa, n=124,766					
	No symptom (n=120,635, 96.69%)	(a) Fever $\geq 37.5^{\circ}\text{C}$ (n=1,831, 1.47%)	(b) Strong feeling of weariness or shortness of breath (n=3,223, 2.58%)	Both (a) and (b) (n=923, 0.74%)	Either (a) or (b) (n=4,131, 3.31%)

SD, standard deviation.

\* For the purpose of anonymization, all cells with less than five people are indicated as NA. In addition, when the number of persons of cells less than five can be uniquely calculated by a combination of numbers (n, %) of a plurality of cells, all the cells of the combination are set to NA (cells with fewer samples are labeled NA preferentially).
