

**Supplemental Figure 1:** Assay optimization using varying concentrations of MgSO<sub>4</sub> and betaine

The amplification time difference between the DNA positive and negative samples of 33 minutes, 30 minutes and 32 minutes respectively in reactions containing 2mM MgSO<sub>4</sub> and 800mM, 400mM and 200mM of betaine respectively. In reactions containing 800mM, 400mM and 200mM of betaine and no MgSO<sub>4</sub>, the reaction time difference between the negatives and positives were 36minutes, 33minutes and 28minutes respectively. There was no amplification when 6mM of MgSO<sub>4</sub> was added to the reaction containing 800mM, 400mM and 200mM of betaine.
