^A231-BR cells (500,000 in Experiment 1; 100,000 in Experiment 2) were injected into the left cardiac ventricle of Balb/c nude mice. SAHA was administered once daily by ip injection starting 3 days post-injection.

^BSize of metastases determined by a 16 mm² ocular grid. Large metastases greater than 300 microns on the longest axis.

per section.

^CMean number of metastases per section counted in 10 step sections from one hemisphere of the brain.

^DA two-factor factorial ANOVA was used to determine significance. All p-values are two-tailed and adjusted for multiple comparisons using Dunnett's method.

^EIn Experiment 1, this group of mice received 200 mg/kg starting 3 days post injection but due to toxicity, the dose was reduced to 150 mg/kg on day 8 post-injection.

^F Not significant.
