

# Opioid Patient Selection

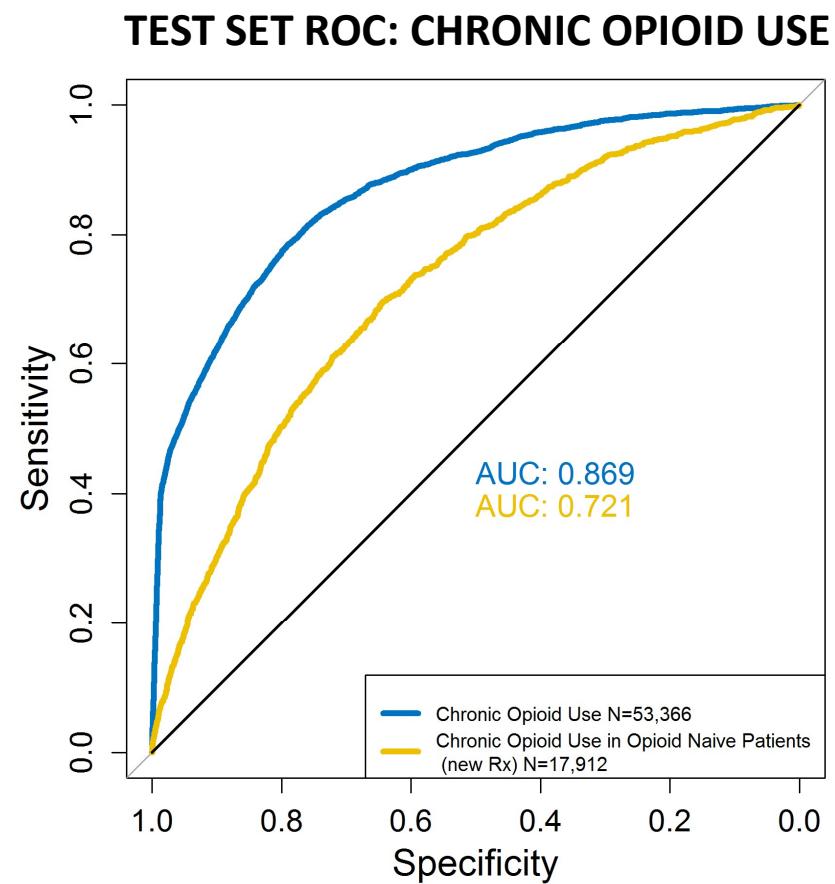

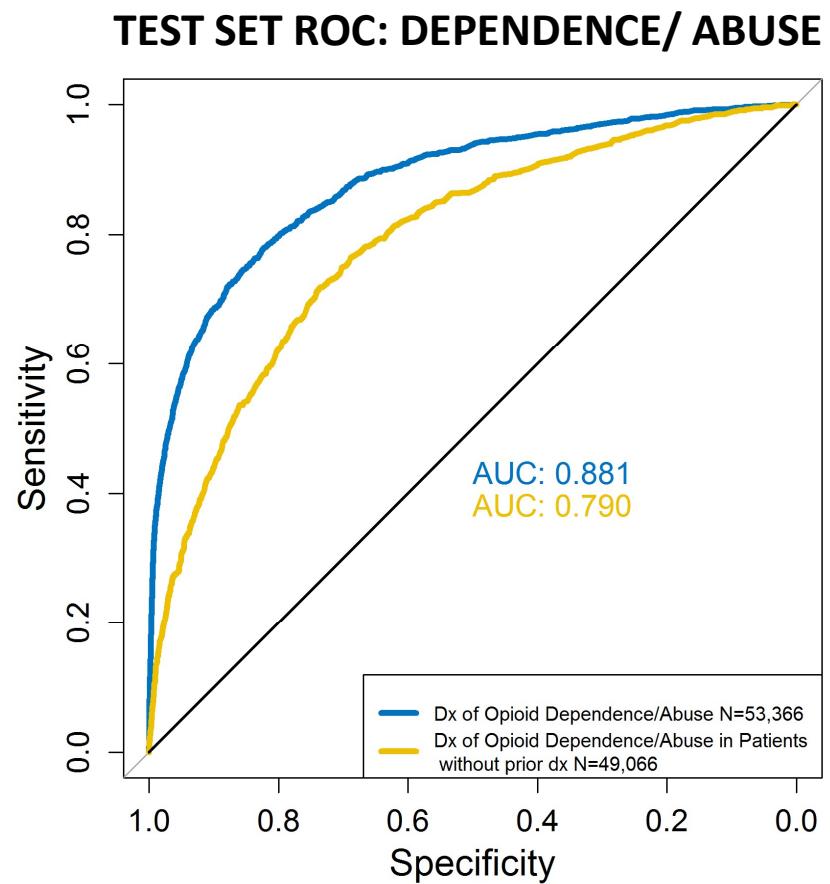

**Supplementary Figure 1: Patient selection for the cohort based on inclusion and exclusion criteria.**

Abbreviations: Dx, Diagnosis; M1, Metastatic Disease; RT, Radiation Therapy.

**Supplementary Figure 2: Validation of non-parsimonious model.** a) ROC curve showing discrimination of the full (non-parsimonious) LASSO model in predicting persistent opioid use, a future diagnosis of opioid abuse or dependence and future admissions for opioid abuse, dependence or toxicity. b) Bar plot showing incidence of persistent opioid use for the predicted risk groups using the full LASSO model. Abbreviations: AUC, Area under the curve; Dx, Diagnosis.

**A****B**

**Supplementary Figure 3: Validation of models among opioid naïve patients and those without a prior diagnosis of addiction.** ROC curve showing discrimination of LASSO model in predicting a) persistent opioid use for all patients and among opioid naïve patients with a new prescription during treatment and b) a diagnosis of opioid dependence or abuse among all patients and those without a prior diagnosis of substance abuse. Abbreviations: ROC, Receiver Operating Characteristic.; AUC, Area under the curve; Dx, diagnosis.

**Supplementary Table 1.** Stratified Logistic Regression By Primary Type\*
