

Supplementary Material

Figure S1

Median survival and progression-free survival. Kaplan-Meier curves are shown for median OS (A) and median PFS (B). OS was determined 9.9 months (95% CI 5.8-14.0 months) and PFS was 4.5 months with 7 death events during the observation period.

Figure S1

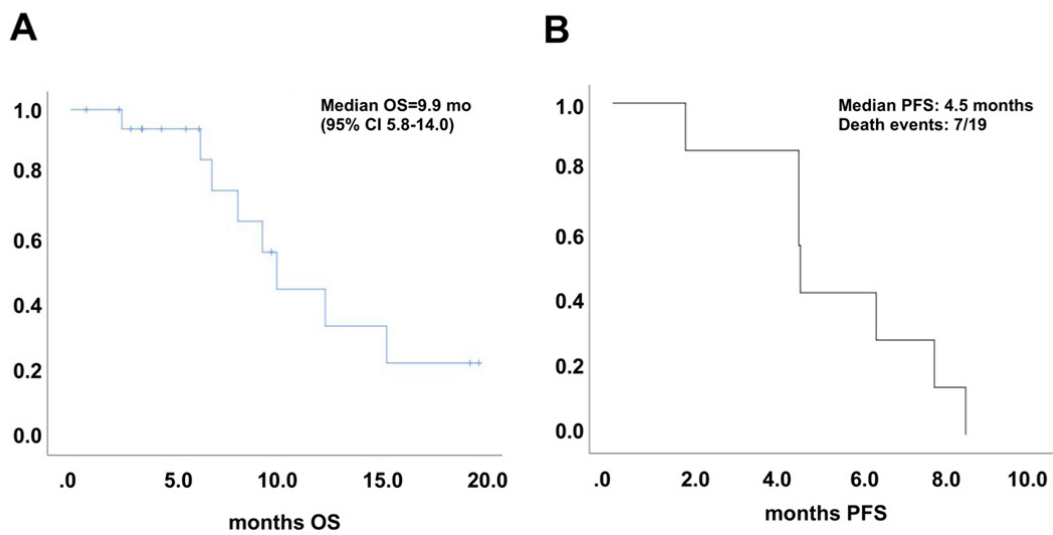

Figure S2:

Blinded evaluation PSMA PET/CT images. Tumor lesions have been classified as PSMA-positive, negative and variable (A). PSMA-PET/CT images have been analyzed and assigned according to this classification for each patient (B). Results were subjected to a grouped analysis for AR-V7^{pos} vs. AR-V7^{neg} patients and plotted in stacked bars per group.
