

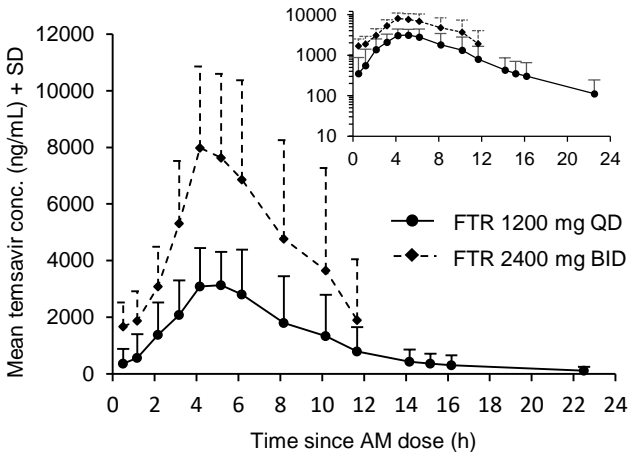

Figure S1. Concentration–time plots and exposure parameters for fostemsavir (FTR) 1200 mg once daily (QD) and 2400 mg twice daily (BID) in study Part B.

Inset shows the concentration–time plot on a semi-logarithmic scale

	1200 mg FTR QD (N=57)	2400 mg FTR BID (N=53)
C_{max} , ng/mL	3584 (41.3)	8900 (32.8)
AUC_{tau} , ng·h/mL	21735 (50.1)	50127 (42.3)
T_{max} , h*	5.20 (2.18–10.2)	4.20 (3.2–10.2)

*Parameters are geometric mean (%CV) or *median (range).*

Profiles are shown for the dosing interval after the first or AM dose.
