

Additional File 3. Magnitude of transcriptional responses following 24 hours of exposure to cytokines. Volcano plots showing magnitude of transcriptional response following exposure to IL-13, IL-17A, or IL-13+IL-17A compared to vehicle. Colored dots represent transcripts DE at FDR<1%; dots in black are not significant in each panel. Log₂(fold change) is plotted along the X-axis and -log₁₀(P-value) is plotted on the Y-axis.
