

1 New Phytologist Supporting Information Figs S1–S4 and Tables S1 & S2
2 Article title: Variation in photosynthetic induction between rice accessions and its potential for improving
3 productivity
4
5 Authors: Liana G. Acevedo-Siaca, Robert Coe, Yu Wang, Johannes Kromdijk, W. Paul Quick and
6 Stephen P. Long. Article acceptance date: 13 January 2020.
7

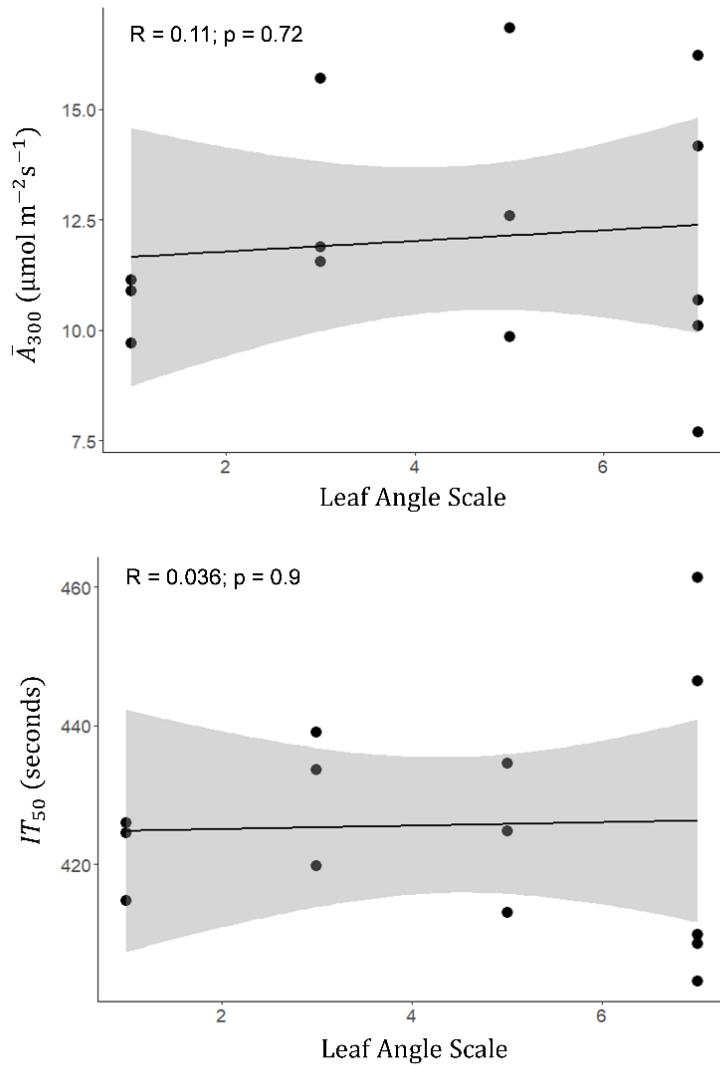

8 **SUPPLEMENTARY FIGURES AND TABLES:**

10 **Fig. S1** Selected rice (*Oryza sativa*) accessions are as follow: 1 – ARC 11768, 2 – ARC 13502, 3 – ARC
11 14663, 4 – AUS 278, 5 – Dechangbyeo, 6 – Du Gen Chuan, 7 – Fei Zhao 12, 8 – JC1, 9 – K2 C45, 10 –
12 Malagkit, 11 – NCS 771A, 12 – M 102, 13 – Malogbana, 14 – IR64-21.

13

14

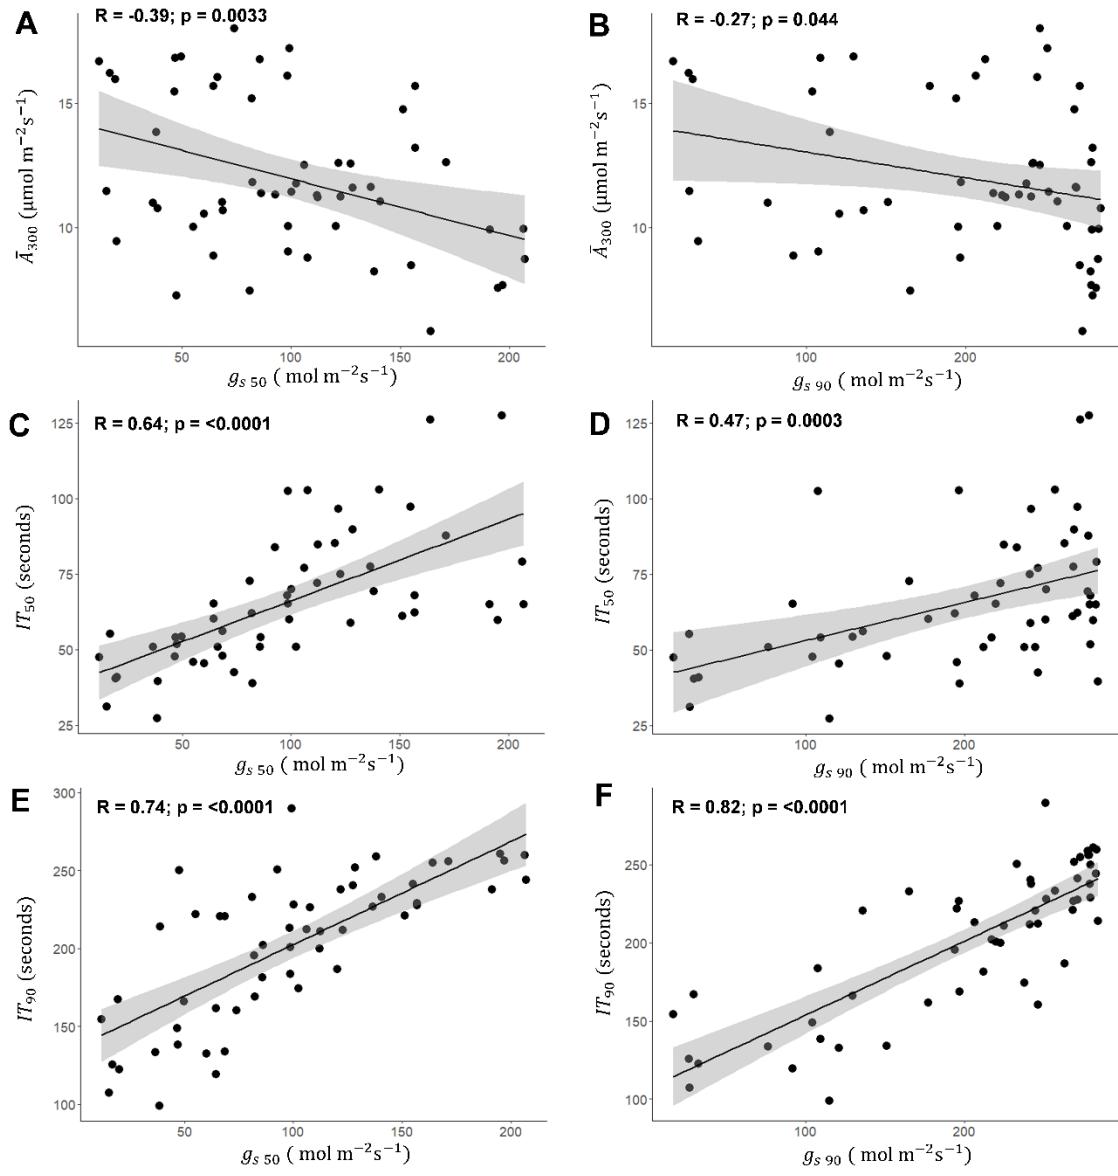

15

16 **Fig. S2** The correlation between \bar{A}_{300} and Leaf Angle, IT_{50} and Leaf Angle. Rice (*Oryza sativa*) leaf
 17 angle can be rated on a scale from 1-9, where 1 is most erect and 9 is most drooping (IRRI Standard
 18 Evaluation System (SES) for Rice, 2002). Correlation coefficient (R), p-value, regression line, and 95%
 19 confidence intervals are shown for each comparison.

20

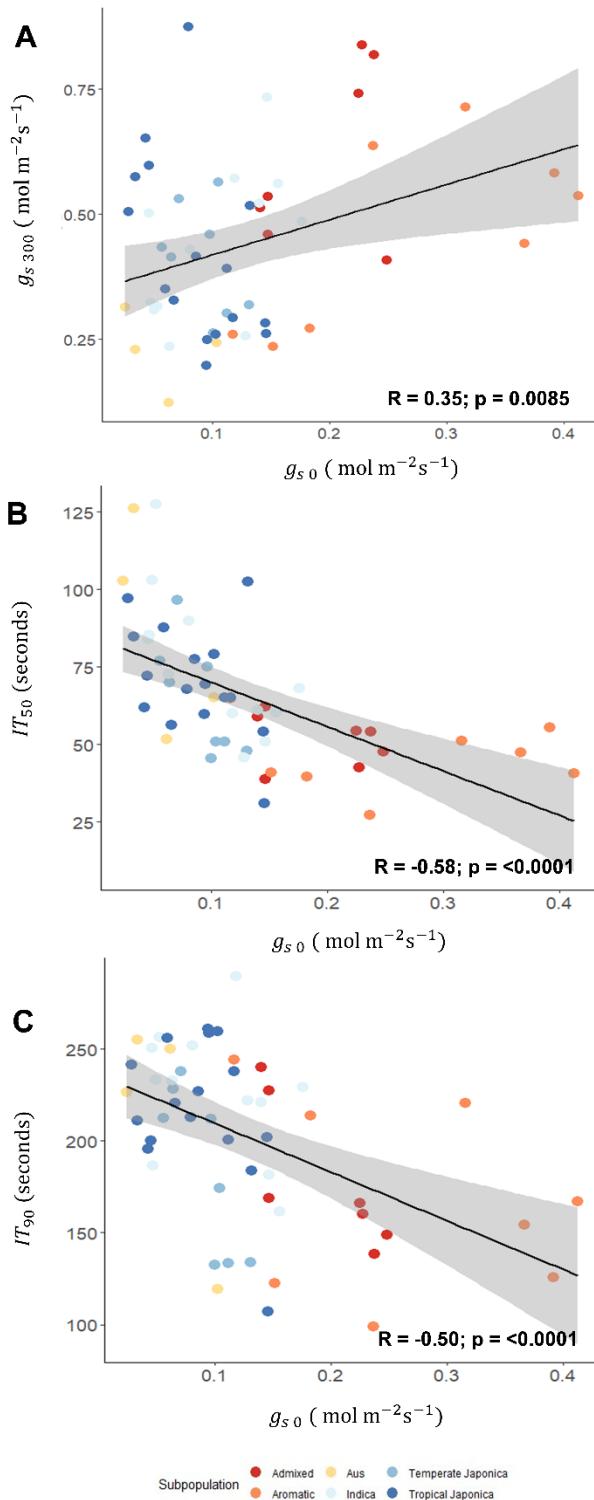

21

22

23

24 **Fig. S3** Correlation between A. time to 50% stomatal opening ($g_s 50$) and average CO_2 uptake during
25 induction period (\bar{A}_{300}); B. time to 90% stomatal opening ($g_s 90$) and \bar{A}_{300} ; C. time to 50% induction (IT_{50})
26 and $g_s 50$; D. IT_{50} and $g_s 90$; E. time to 90% induction (IT_{90}) and $g_s 50$; F. IT_{90} and $g_s 90$, measured in rice
27 (*Oryza sativa*). Correlation coefficient (R), p-value, regression line, and 95% confidence intervals are
28 shown for each comparison.

29

30 **Fig. S4** Correlation between **A.** g_s right before transition from low light to high light (50 to $1700 \mu\text{mol m}^{-2}$
 31 s^{-1} PPF) ($g_{s\ 0}$) and at 300 s after induction ($g_{s\ 300}$); **B.** $g_{s\ 0}$ and IT_{50} ; **C.** $g_{s\ 0}$ and IT_{90} , measured in rice
 32 (*Oryza sativa*). Correlation coefficient (R), p-value, regression line, and 95% confidence intervals are
 33 shown. Plants are color-coded by subpopulation.

34 **Table S1** *O. sativa* accessions selected from the 3000 Rice Genome Project (3K RGP) used to
35 characterize natural genetic variation for photosynthetic induction in rice. The IRGC number,
36 subpopulation, and country of origin are indicated.

Accession #	Accession Name	IRGC Number	Subpopulation	Geographic Region
1	ARC 11768	IRGC 131966	Tropical Japonica	India
2	ARC 13502	IRGC 127948	Aromatic	India
3	ARC 14663	IRGC 127959	Admixed	India
4	AUS 278	IRGC 127182	Aus	Bangladesh
5	Dechangbyeo	IRGC 128275	Temperate Japonica	South Korea
6	Du Gen Chuan	IRGC 127345	Indica	China
7	Fei Zhao 12	IRGC 128291	Temperate Japonica	China
8	JC1	IRGC 117494	Aromatic	India
9	K2 C45	IRGC 131995	Tropical Japonica	Cote d'Ivoire
10	Malagkit	IRGC 127594	Tropical Japonica	Philippines
11	NCS 771A	IRGC 127665	Indica	India
12	M 102	IRGC 125620	Tropical Japonica	United States
13	Malogbana	IRGC 128379	Admixed	Cote d'Ivoire
14	IR64-21	IRGC 135929	Indica	Philippines

54 **Table S2** SNP sequences for Rubisco activase (Rca) gene in rice (*Oryza sativa*). Sequences for Rca were
 55 acquired through the International Rice Informatics Consortium (IRIC) Rice SNP-seek Database
 56 (http://snp-seek.irri.org/_snp.zul) managed by the International Rice Research Institute (IRRI).
