

Figure S1. Efficiency of transfection determined by reverse transcription-quantitative PCR. (A-C) Chondrocytes were transfected with (A) miR-17-5p mimic, in-miR-17-5p, (B) miR-19b-3p mimic, in-miR-19b-3p, (C) EZH2 overexpression vector and si-EZH2. *P<0.05. miR, microRNA; in, inhibitor; si, small interfering RNA; EZH2, enhancer of zeste homolog 2.
