Supplementary Figure Legends

Figure S1. Serum piR-54265 is an early specific marker for CRC. A–D. The performance of serum piR-54265 levels in discriminating HIN (**A**) or stage I (**B**) or stage II (**C**) or stage I and II (**D**) of CRC patients and CRC-free controls by receiver operating characteristic (ROC) curves analysis. Pink and red dots indicate the example cut-off values estimated by Youden's index analysis. AUC, area under ROC curves.

Abbreviations: BMI, body mass index; IQR, inter-quartile range; SD, standard derivation.

^aNormally and non-normally distributed variables were presented as mean ± SD and median (IQR), respectively. For categorical variables, values were presented as number (percentage).

^bEleven cases and 8 controls had missing BMI data.

^cOne control had missing data of CEA, CA125 and CA19-9.

CC, colon cancer; RC, rectal cancer.

¹Control were age (± 1 year, extended to 5 years) and sex frequency-matched to CRC cases at a ratio of 2:1.

²Individuals smoke at least one cigarette per day for more than six months were defined as current smokers (yes).

³Individuals drink at least once per week for more than six months were defined as current drinkers (yes).

⁴Regularly exercising for more than 20 min per day over the last six months was defined as physical activity (yes).

⁵Mean of triplicate measurements and the standard error of mean (SEM). Serum piR-54265 levels were determined from baseline blood of individuals when they were recruited in the cohort.
