

Figure S1. PCA plot of three breeds, indicating genetic variation along the second and third eigenvectors. The dots indicate Duroc (salmon), Yorkshire (blue), and Landrace (green).

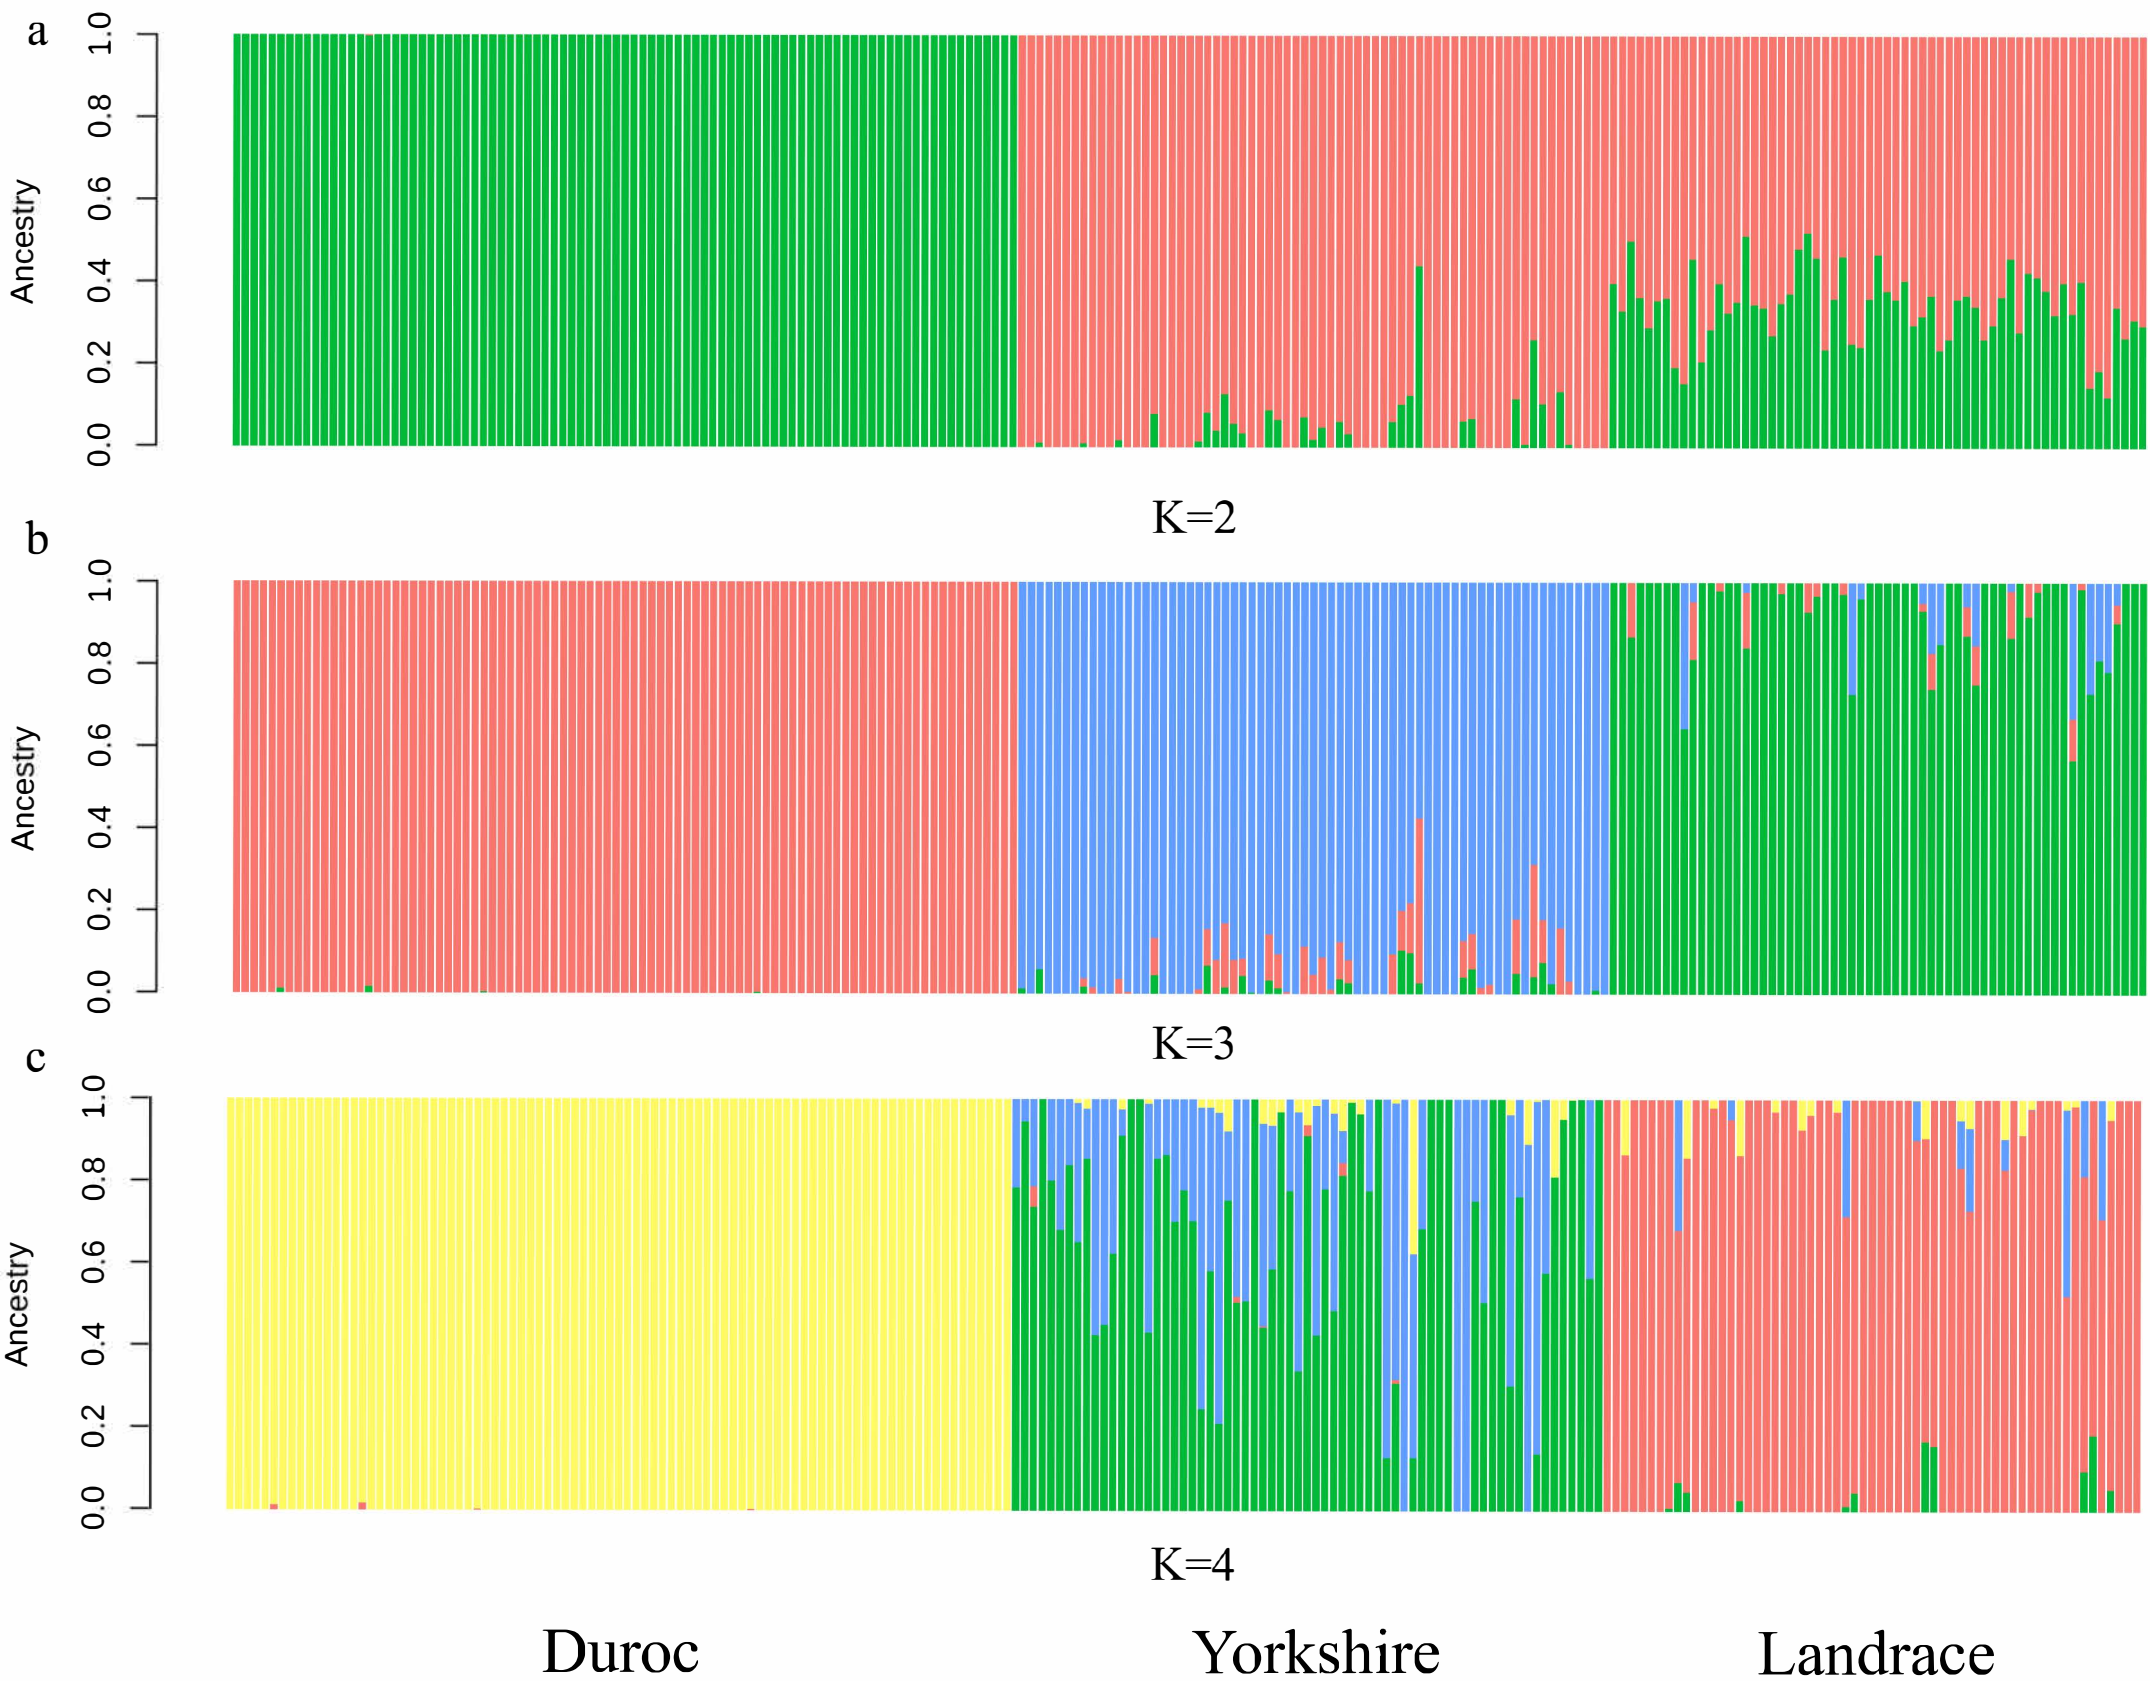

Figure S 2. Population assignment proportions per individual based on results from ADMIXTURE analysis. In the plot, each vertical bar represents a single individual and the different colors reflect the genetic contribution from each of the three components.(a) the analysis with $K=2$. (b) the analysis with $K=3$. (c) the analysis with $K=4$.
