

THE LANCET HIV

Supplementary appendix

This appendix formed part of the original submission. We post it as supplied by the authors.

Supplement to: Davey DLJ, Bekker L-G, Mashele N, Gorbach P, Coates TJ, Myer L. PrEP retention and prescriptions for pregnant women during COVID-19 lockdown in South Africa. *Lancet HIV* 2020; published online Aug 3. [http://dx.doi.org/10.1016/S2352-3018\(20\)30226-5](http://dx.doi.org/10.1016/S2352-3018(20)30226-5).

Supplementary tables: Missed visits and drug pick-ups in PrEP in pregnancy study before COVID-19 lockdown and during lockdown, Cape Town, South Africa (n=414 women on PrEP)

	1-month visit				3-month visit			
	Attended	Missed	Not eligible for visit*	% missed visit (of eligible visits)	Attended	Missed	Not eligible for visit*	% missed visit (of eligible visits)
Pre COVID lockdown (August, 2019 to March 27, 2020)	207	84	22	29%	113	80	34	41%
During lockdown (March 28 to June 1, 2020)	19	32	50	63%	51	62	74	55%

	Total attended	Total missed	% missed visits
Pre-lockdown	320	164	34%
During lockdown	70	94	57%

*Not eligible for visit because censored before visit or not time for visit at date of analysis; not included in denominator for % missed.
