<sup>1</sup>Abbreviations: CON, control group; OF, pigs fed oligofructose; OF + 2'FL, pigs fed oligofructose and 2'fucosyllactose; *r*, Pearson correlation coefficient; *P*, P-value;  $\beta_1$ , slope of linear regression equation; *DRD3*, dopamine receptor D3; *GABBR1*, GABA type B receptor subunit 1; *HDAC5/8*, histone deacetylases 5 and 8; *NCAM1*, neural cell adhesion molecule 1; *CHRM2*, cholinergic receptor muscarinic 2.

<sup>2</sup>Correlations were performed using only the outcomes significantly affected by diet for MRI and gene expression outcomes against the recognition index after a 1- or 48-h delay. Correlations are presented by diet group, whereas diet was not included in the linear regression model to estimate the diet independent relationship between outcomes. P-values indicate whether the Pearson correlation coefficient or slope are significantly different from zero, indicating a linear relationship between outcomes.
