

Figure S1. Kaplan-Meier survival curves of CXCL17 and GPR35 mRNA expression levels in colon cancer. P-values were obtained using the log rank test. Expression level cut-offs were determined based on (A and B) median mRNA expression levels or (C and D) mean mRNA levels. N=432. CXCL17, C-X-C motif chemokine ligand 17; GPR35, G protein-coupled receptor 35.
