

Supplementary Material

Supplementary Figure S1 | PCoA analysis of the fungal community of 110 infants enrolled in this study. Samples ($n = 564$) were subsampled according to age, phase, and site. Large circles represent subsamples from 39 subjects included in the three sampling batches (baseline, week 6, and week 12), and small circles represent subsamples from the remainder of the 110 subjects included in only baseline sampling.

Supplementary Table S1 | The information of 110 subjects enrolled in this study. Subjects were all sampled at baseline and 39 of them, with a marker of “3” in the column titled “Sampling times involved in this study”, were included in sampling at week 6 and week 12. A1, 0 - 2 months; A2, 2 - 3 months; A3, 3 - 4 months; A4, 4 - 5 months; A5, 5 - 6 months. (Please see Data sheet 2)
