

Figure S3

Immunofluorescence of whole-mount Tek Cre and YAP^{f/f} retinas in ROP mice, which were stained by GFAP (green) and IB4 (red).

(a) There was no significant difference in avascular area percentage between Tek Cre and YAP^{f/f} mice under hyperoxic conditions. (b)

At P17, there was no significant difference in the neovascular area percentage between Tek Cre and YAP^{f/f} mice under hypoxic conditions. (n=3; ns, p>0.05;). Bar = 50 μ m.
