

Supplementary figure S3 Pneumococcal serotype-specific IgG (geometric mean concentrations with 95% Cis, $\mu\text{g}/\text{mL}$) in children after PCV13 vaccination with catch-up (1-2 doses), 2+1, and 3+1 schedules. Three main study groups were further divided into three subgroups according to time since PCV13 vaccination, <1 year, 1-2 years, and 2-5 years. P values < 0.05 were regarded as statistically significant. Panels A, B, and C refer to serotypes 3, 14, and 19A, respectively.
