

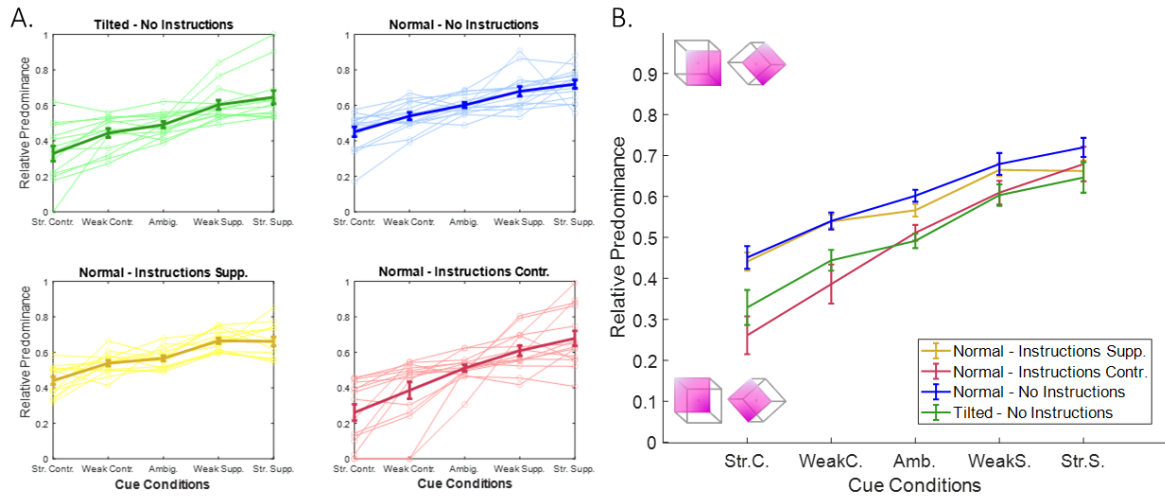

Figure S6.

Experimental results after excluding only the 7 outliers who also exhibited qualitatively strange behavior (flat psychometric curves or curves with negative slope or extreme values of RP in the weak-cue or ambiguous condition).

All the results presented in the **Main Text** remained unchanged (Interaction: $p < 0.001$; BIC Scores: NB = -160.88; WB = -159.20; CI = -165.56 \pm SE).
