

Supplementary Materials

Figure S1. Purification of viral RNA from allantoic fluids of mock- or H1N1 IAV-infected chicken embryonated eggs. The viral RNA was checked by agarose gel electrophoresis for 20 μL purified samples (a) and RT-PCR products for segment 4 (b), as described in Materials and Methods. Any pellets after ultracentrifusion and enough RNA concentration for gel electrophoresis were not observed in the mock-infected sample.
