

Title: Supplementary Data file 1

Description: Liquid Chromatography with tandem mass spectrometry (LC/MS-MS) proteomic data. Proteins identified in the epsin 1 immunocomplex and IgG control data are shown from top to bottom. The IgG control gel is shown below the IgG control data.

Title: Supplementary Data file 2

Description: Gene ontology (GO) analysis data. The GO aspects of biological process, cellular component, molecular function, and a summary are shown from top to bottom.

Title: Supplementary Data file 3

Description: Medical information for human atherosclerosis patient samples. Specific diagnostic information is listed below the summary chart.

Title: Supplementary Data file 4

Description: List of key resources. Sources of antibodies, reagents, experimental models, recombinant vectors, and PCR primers are shown.
