

3 - Predictive Models Used In This Challenge

Guide to Submissions to the NIEHS-NCATS-UNC DREAM Toxicogenetics Challenge

Participants in the [NIEHS-NCATS-UNC DREAM Toxicogenetics Challenge](#) were provided with training data giving a measure of cytotoxicity (EC10) for each of 487 cell lines derived from the [1000 Genomes Project](#).

There were 2 parts to the challenge with separate winners in each category. In [Subchallenge 1](#), the task was to predict toxicity for previously seen compounds in new cell lines, while [Subchallenge 2](#) asked participants to estimate the distribution of toxicity of new compounds across cell lines.

Winning Submissions

Subchallenge 1

The [winning entry for subchallenge 1](#) came from [Tao Wang](#) of the [Yang](#) lab at the [Quantitative Biomedical Research Center](#) at UTSW. [R source code](#) available.

Runners up, [Team CASSIS](#), submitted an entry titled, [Kernel Bilinear Regression for toxicogenetics](#) along with [source code in R](#).

Subchallenge 2

The [winning entry for subchallenge 2](#) also came from [QBRC](#), this time from a team led by [Hao Tang](#). The approach was to cluster compounds then predict based on similarity of new compounds to the clusters. [R source code](#) available.

Participating Teams

Subchallenge 1
