

Supplement for “Modeling the role of  
asymptomatics in infection spread with  
application to SARS-CoV2”

Hana M. Dobrovolny

In this supplement we present graphs showing the parameter distributions determined from bootstrapping and include the data used to estimate parameters for the SARS-CoV-2 epidemic in California, Florida, New York, and Texas.

Table 1: Epidemiological data for California.

Day	Cumulative Infected	Cumulative Dead
0	148	2
1	161	3
2	246	4
3	249	4
4	288	4
5	355	4
6	465	6
7	578	11
8	734	14
9	888	17
10	1063	19
11	1292	24
12	1532	29
13	1838	33
14	2272	40
15	2672	52
16	3222	67
17	4092	70
18	4179	83
19	5624	115
20	5970	124
21	7037	142
22	8275	168
23	9757	206
24	10143	236
25	9394	203
26	13139	289
27	15156	344
28	16195	372
29	17595	430
30	19020	485
31	20229	538
32	21023	556
33	22257	602
34	23851	674
35	24730	721
36	24745	721
37	26598	790
38	28523	890
39	29129	973

Table 2: Epidemiological data for Florida.

Day	Cumulative Infected	Cumulative Dead
0	139	3
1	172	5
2	222	6
3	335	7
4	440	8
5	662	10
6	772	10
7	1017	12
8	1243	16
9	1430	18
10	1999	23
11	2485	29
12	2791	34
13	4094	56
