$\beta$  represents regression coefficients for log<sub>2</sub>-transformed HRV values adjusted for age, race/ethnicity, sex, education level, systolic blood pressure, CESD score, smoking status, body mass index, physical activity, antihypertensive and antiarrhythmic medication use, diabetes, APOE genotype, and incident myocardial infarction, heart failure, and stroke/TIA.

CASI: Cognitive Abilities Screening Instrument; CESD: Center for Epidemiological Studies Depression scale;

CI: confidence interval; RMSSD: root mean square of successive differences; SDNN: standard deviation of

normal-normal intervals; TIA: transient ischemic attack.
