

Supplementary Fig. 1. a-f) Photomicrographs showing immunoreactivity for angiotensin-converting enzyme 2 (ACE2) in submucosal wholemount preparation of human colon. a-c) Stars indicate submucosal plexus HuC/HuD immunoreactive neurons (a) co-expressing bright ACE2 immunoreactivity (b). d-f) Stars and arrows indicate the nuclei of vascular endothelial cells and pericytes, respectively, which expressed bright ACE2 immunoreactivity.

Bar: a-f= 100 μ m
