

Supplemental Figure S2. Total dendrite length during pruning

Total dendrite length of wild-type control (WT) and *miR-87* overexpressing (*miR-87 o/e*) C4da neurons at white pupa (WP), 12 hours after pupal formation (12 hr APF), and 24 hours after pupal formation (24 hr APF). Note that no obvious difference was observed in dendrite pruning processes between WT and *miR-87 o/e* neurons. Error bars indicate mean ± S.D; n = 15; n.s., not significant (unpaired *t*-test).
