

Supplementary Figure 1. (A) and (B) Representative western blot images and quantified data of BAX, BCL-2, P53 and cleaved-caspase3 protein levels in H9c2 cells (H/SD condition) treated with PBS, Nor-exo or Hypo-exo (n=3). Data are presented as mean \pm SEM. Statistical analysis was performed with one-way ANOVA followed by Bonferroni's correction. *P < 0.05.
