

Supp. Fig. 5: A) Principle coordinates ordination of saliva LC-MS/MS lipidomics, colored by whether the sample originated from mother or child. B) Principle coordinates ordination of saliva metabolomes by GC-TOF, colored by whether the sample originated from mother or child. C) Principle coordinates ordination of urine lipidomes, colored by age. All timepoints for mothers (n=15 samples) were used (i.e. Trimesters 1-3).
