

Figure S1. Appearance of cakes after freeze-drying and vacuum-drying in trehalose and sucrose solution in a 12-well plate. A total of 125 μ l of 10, 25, 50, 100, or 150 mM (0.43, 1.1, 2.1, 4.3 and 6.4 mg) trehalose or sucrose solution were transferred to 12-well plates, followed by (A) freeze-drying or (B) vacuum-drying.
