<sup>a</sup> The maximum testing capacity for the laboratory was 100 individual specimens per day; Group 1 – 9 were performed in parallel with 89 individual specimens on the first day, and Group 10 – 18 were performed in parallel with 86 individual specimens on the next day (N=175); Internal positive control (Pos. ctrl) was spiked into one of the pool for each day the screening was conducted.

<sup>b</sup> Interpretation of results of individual clinical specimen and pooled specimens on qRT-PCR assays; A pool or sample was considered positive for COVID-19 if the C<sub>T</sub> value was less than or equal to 38. (+) Positive for COVID-19; (-) Negative for COVID-19.
