Table S2. Spearman rank correlation coefficients (r_s) between clinicopathological factors and the examined microRNAs in all tissues ($n = 54$) and serum ($n = 102$) samples. The significantly differentially expressed miRNAs and correlations are highlighted in **bold** and indicated as: *** $p < 0.0001$, ** $p < 0.0005$, * $p < 0.005$; the correlation strength is marked with an appropriate color, the darker the color, the greater the relationship between variables.
